## REPORT

TO

The Right Honourable HENRY AUSTIN BRUCE, M.P., Her Majesty's  
Principal Secretary of State for the Home Department,  
&c. &c. &c.

General Register Office, Somerset House,  
1st July 1871.

SIR,

I HAVE the honour to submit to you my Annual Report for the year 1869. All the figures in my Quarterly Reports for that year have been carefully revised, and an extensive series of facts has been added, so as to present a comprehensive analysis of the most important changes in the English population.

It has been deemed right for various reasons to delay the publication of this Report until the population was ascertained, in order to introduce the necessary corrections in the dependent calculations, and it is found that in the first two years of the last decade the required correction is insig-

TABLE 1.—Estimated Population, with the Number of Marriages, Births, and Deaths registered in England, in each Year from 1838 to 1869.

YEARS ended Dec. 31st	Estimated POPULATION in ENGLAND in the Middle of the Years.*	MARRIAGES.	PERSONS MARRIED.	BIRTHS (exclusive of Still-born).	DEATHS	EXCESS OF BIRTHS OVER DEATHS.

1865	20,990,946	185,474	370,948	748,069	490,909	257,160
1866	21,210,020	187,776	375,552	753,870	500,639	253,181
1867	21,429,508	179,154	358,308	768,349	471,073	297,276
1868	21,649,377	176,962	353,924	786,858	480,622	306,236
1869	21,869,607	176,970	353,940	773,381	494,828	278,553

\* The Population of each of the years since 1851 is deduced from the ascertained rate of increase observed in the twenty years, 1841-61, an allowance being made for the decrease in the rate during the latter ten years. The estimates for the years subsequent to 1861 will be subject to correction so soon as the revised numbers enumerated at the recent Census, taken on 3d April last, shall be available.

nificant. In 1869, the last of the series now dealt with, the marriage, birth, and death-rates become after correction of the population 16·2, 35·3, and 23·0, instead of 16·4, 35·9, and 23·3. The error only appears in the first decimal, so the correction of the rates in the Tables is deferred until the population returns have been finally revised.

Although this element of error in the estimate of persons living in the last few years is found to be slight, consideration in detail of all calculated rates, having population for a basis, has been deferred, and attention has been principally devoted to an examination of the facts themselves.

The number of persons who married was almost the same as in the year preceding, and it was much higher than any numbers before 1864; but the number of bridegrooms and brides was much lower absolutely, and still lower relatively to population, than the numbers in the extraordinary years 1864-5-6, when the marriage-rate of England was at its maximum. The births were numerous, but not so numerous as in the previous year. The deaths exceeded the numbers in any year since 1860, their causes will be discussed elsewhere. The excess of registered births over deaths, was 278,553 against 306,236 and 297,276 in 1867 and 1868, and was equal to 763 per day. The prosperity and health of the country suffered some depression in the year.

We cannot be surprised to find under these circumstances an increase in the flow of emigration to our enterprising colonies, and to the United States of America, where some voids had been left by the civil war. The emigrants from the United Kingdom amounted to 258,027, being at the rate of 707 daily; of these 92,555 were of English origin, 23,097 of Scotch, 75,064 of Irish, and 67,311 were foreigners; 5,975 whose birth-places were not distinguished have been proportionally distributed in this

TABLE 2.—Proportion of Marriages, Births, and Deaths to the Population of England, in each Year from 1838 to 1869.

Mean . .	8·26	16·52	33·78	22·41	121	61	30	45

NOTE.—The Table may be read thus:—In the year 1838 to every 100,000 persons living there were 771 marriages or 1542 persons married, 3029 births, and 2238 deaths; the number of persons living to every marriage, persons married, birth or death, was 130, 65, 33, and 45 respectively. A correction for increase of population has been made in calculating the above results; no correction, however, has been made for leap years.

statement. Of the adult emigrants, 60,464 were married; 99,524 were bachelors, 39,392 were spinsters; 21,597 were boys and 19,265 girls, of

\* In the case of mixed marriages between Protestants and Roman Catholics some couples are married twice, and are counted twice in the Registers.

the age one to 12 years; 11,849 were infants in arms; while the ages of 3836 males, 2100 females were not distinguished.

While the increase over the previous year in the total number of emigrants was large, amounting to 61,702, it was more especially marked in those of English origin, the number of whom rose from 60,265 in 1868 to 92,555 in 1869.

The United States attracted 203,001 of the emigrants, 33,891 went to British North America, 14,901 to the Australian Colonies, and 6,234 to various other places; 5,463 sailed from ports at which there were no Government emigration officers. Details showing the occupations, sex, and ages of the emigrants are given in tables at pages lxiv-v.

I will now notice more particularly the marriages out of which future births spring, and the facts respecting the 773,381 children that entered England by birth, as well as the 494,828 persons of all ages and classes who quitted its villages and cities by death.

The national registers thus received in 1869 an addition of one million six hundred and twenty-two thousand one hundred and forty-nine names, raising the aggregate number since the commencement of civil registration in 1837 to *forty-three millions six hundred and seventy-five thousand and thirty-five*.

The principal features presented by the meteorology of the year are described in the Summary of the Quarterly Reports, pp. xxxix-lvi, and are exhibited in Mr. Glaisher's Tables, pp. lxx-lxxiii. The mean temperature of the air at the Royal Observatory, Greenwich, was  $49^{\circ} \cdot 5$  or  $0^{\circ} \cdot 1$  above the average:  $24 \cdot 0$  inches of rain fell, being  $0 \cdot 2$  below the average.

\* The proportion of Widowers and Widows in the Year 1841 is for the September and December quarters only.

The price of wheat was considerably lower than in the previous year. The fall which commenced in the latter part of 1868 continued in the early part of 1869: in the first three months the price averaged 50s. 2d. per quarter, in the next three months 45s. 7d., in the third quarter

42	Monmouthshire - - -	16'84	64'7	58'3	7'31	26'47	12'83	9'95
43	South Wales - - -	15'30	70'1	53'6	7'45	19'04	13'47	9'93
44	North Wales - - -	12'94	71'2	60'2	4'40	12'46	15'15	8'06

The Table may be read thus by omitting the decimal points:—In England, among every 100,000 persons living 1618 persons were married; of 1,000 men married 801, of 1,000 women 724, signed the marriage register by writing their names; of 1,000 men married 72 were not of full age, of 1,000 women married 224 were not of full age; of 1,000 men married 140 were Widowers, of the same number of women married 95 were Widows.

50s. 11d., and in the last three months 46s.; the average for the year being 48s. 2d. per quarter compared with 63s. 9d. in the previous year. The wholesale price of potatoes also fell from 137s. 6d. per ton in 1868 to 99s. 6d. in 1869. The returns of pauperism show a slight increase, the average numbers of persons receiving relief on the last day of each week, being 149,207 in-door, and 815,570 out-door, against 148,511 in-door and 809,336 out-door in the previous year. England is the only country which by its laws insures under defined conditions, the whole population against death by starvation.

### MARRIAGES.

The persons married during the year 1869 were 353,940, an excess of 16 over those in the previous year, but less by 4368 than in 1867, and 21,608 below the number in 1866. As the fluctuations in the marriages express pretty accurately the varied condition and prospects of the people, it may be inferred from these numbers that the effects of the commercial depression of the country which began in 1866-7 had not been dispelled.

The average minimum rate of discount charged by the Bank of England was slightly over 2 per cent. in 1868, rose to nearly  $3\frac{1}{4}$  in 1869, exhibiting, as economists inform us, a more healthy condition of trade.

The average price of wheat was 48s. 2d. per quarter against 63s. 9d. per quarter in 1868. An increased number of marriages may be expected as the necessaries of life become cheaper.

Mean Annual Rate per 1000 in each quarter					-	6'89	8'39	7'92	9'77

\* These rates may be read thus without reference to the decimal points:—In the March quarter of 1838, to 100,000 persons living, there were 618 marriages registered. A correction has been made for the varying numbers of days in the different quarters, see note to Table 13.

Of the 176,970 marriages, the numbers celebrated according to the rites of the Established Church were 135,082, or 76 per cent. The numbers performed not according to the rites of the Establishment were 41,888, or 24 per cent. The proportion in 1868 was 77 and 23 per cent. respectively. Of 100 couples who married in 1869 according to the rites of the Church .01 were married by special licence, 13 by licence, 82 after banns, and 3 by Superintendent Registrar's certificate, while in 2 per cent. it was omitted to be stated under which of the foregoing heads the marriages should be classed. Of 100 couples who married not according to the rites of the Church of England 17 were Roman Catholics, .1 were Quakers, 42 were members of various other Christian denominations, .8 were Jews, and 40 were married without religious ceremony at the Superintendent Registrars' offices.

The marriages of Quakers declined from 73 in 1868 to 50 in 1869. The marriages of Jews on the contrary increased from 306 to 336 in the two years.

Of the 176,970 marriages celebrated in 1869, 144,516 were between bachelors and spinsters, 7724 between bachelors and widows, and 15,722 between widowers and spinsters; and 9008 between widowers and widows. These proportions nearly correspond with the proportions of the former year, except in the case of the marriages of bachelors and widows, which increased 2.7 per cent.

There were 45 marriages in the year 1869 in which one of the contracting parties is stated to have been previously divorced.\* The registers of marriages show that 15 divorced men married spinsters, 5 divorced men married widows, 17 bachelors and 8 widowers married divorced women. Two divorced men married divorced women.

*Buildings registered for Marriages.*—The number of these buildings on the register at the end of the year 1869 was 6212; 1789 of these belonged to the Independents or Congregationalists; 1255 to the Baptists; 1593 to the various bodies of Wesleyan Methodists; 326 to the Calvinistic Methodists; 184 to the Presbyterians; 161 to the Unitarians; 668 to the Roman Catholics; the United Brethren or Moravians have 19 buildings registered for marriages; the New Jerusalem Church has 27, and the Catholic and Apostolic Church has 19. The number of places of meeting certified for public worship to the Registrar General and on the register on 31 December 1869, including the 6212 registered for marriages, was 17,590. The list comprises nearly 100 different religious titles but probably with far fewer distinctions of creed. Some of the communities are so small that they are each represented by only one place of worship.

*Re-marriages.*—The number of widowers and widows who married was 24,730 and 16,732 respectively; the mean age of the widowers who married in 1869 was 42.6, while the mean age of widows was 39.1.

*Marriages of Minors.*—12,775 men and 37,813 women married under 21 years of age, so that of 100 men who married 7.22 and of women who married 21.37 were minors. The marriages of minors continue to increase. The proportion of young women under age was 17.6 in a 100 for the ten years 1850–59, while it was 20.1 in 100 for the ten years 1860–69. The proportion of men under age also increased in the same years. The counties which supplied the greatest proportion of males who married under 21 years of age are Bedford 13.6, Leicester 12.4, Huntingdon 11.9, Nottingham 11.1, Staffordshire 11.1, Northampton 10.2; and of females under age were Durham 33.4, Stafford 30.3, West Riding of York 26.7, Monmouth 26.5, Cambridge 26.4, Leicester 26.3. As the total number of marriages in 1869 was only 8 in excess of the number

---

\* The number of absolute decrees of divorce pronounced by Her Majesty's Court for Divorce and Matrimonial Causes, in the year 1869, was 159. (*Judicial Statistics*, 1869, Part II., p. xxxv.)

in 1868 the differences in the various particulars between those years may be seen at a glance.

*Ages of persons married.*—Of 176,970 marriages in the year 1869 the precise ages of both parties were specified in 121,681 instances. In every 100 marriages the ages of one or both of the parties were omitted to be recorded in 31 cases. This defect is to be regretted, but there is a considerable improvement on former years. It is very desirable that whenever practicable the officiating minister and Registrar should ascertain and record the exact age. It would greatly add in future years to the means of identification in pedigree and other inquiries.

There were three deplorable cases in which men aged 80 and under 85 were married to women of 21–25, 30–35, 35–40, and one case in which a man of fourscore years married a bride of the same mature age.

The mean age of persons who married in 1869, including those who re-married, was 28·0 years for the men, and 25·7 years for the women; excluding widowers and widows, the mean age was 25·8 years for the bachelors and 24·4 years for the spinsters.

*Signature of Marriage Registers.*—35,199 men and 48,758 women made marks in signing the marriage register in the year 1869. Of 100 men married 20, and of 100 women 28, did not sign their names. The returns continue to afford proofs of slow improvement in the elementary education of the people; in the year under review out of every 100 persons married 17·0 were able to write their names in excess of the number in 1841, 28 years previously. The improvement has been greater in women than in men. In 1841 in 100 marriages the proportion of men and women who signed by mark was 33 and 49 respectively, and in 1869 it was 20 and 28. The ability to write the name is to some extent a test of the state of elementary education, for while there are some who are able to sign their name and nothing more, there are others, who writing with difficulty, even in less embarrassing situations than when surrounded by the spectators of a marriage ceremony, are satisfied with making a mark.

In some parts of England and Wales scarcely more than one half of the women who married were able to sign their names. In South Wales the proportion per cent. was 53·6, Staffordshire 56·0, Monmouth 58·3, Lancashire 59·0, North Wales 60·2. Among men the per-centages who wrote their names were lowest in Staffordshire 64·6, Monmouth 64·7, Suffolk 68·7, Cambridge 68·9, Bedfordshire 70·0, South Wales 70·1, North Wales 71·2, Shropshire 71·3.

The Counties and extra-metropolitan parts of Counties in which the highest proportions of women who wrote their names are Surrey 88·7, Sussex 88·6, Rutland 87·5, Middlesex 87·1, Westmorland 85·5, Hants 85·4, Kent 83·9, Berks 83·0. In London the proportion was 85·0. Among men the per-centages were highest in Westmorland 90·2, Rutland 86·2, Northumberland 85·7, Middlesex 85·3, Surrey 85·1, North Riding of York 84·8, East Riding of York 84·5. In London the per-centage was as high as 91·0.

In the South Eastern and Eastern Counties the proportions of women who wrote their names exceeded that of men; the same rule obtained in nearly all the purely agricultural Counties.

#### BIRTHS.

773,381 children born alive were registered in 1869, less by 13,477 than the number recorded in the previous year.

This is the first year since 1860 in which there is a decrease of births. During the ten years ended 1869 the increase had averaged 8933 per annum. Marriages, which were as high as one in 113 of the population in 1865 and 1866, declined to one in 122 in 1868, and were one in 124 in 1869; hence one cause of the diminution in the number of births.

*Sex.*—Of the 773,381 children born alive 394,570 were boys, and 378,811 were girls. Thus to every 100 girls 104·2 boys were born.

The proportion ranged in the counties from 100·8 in Shropshire to 113·7 in Rutland. It is worthy of notice that Rutland, which stood highest in the Kingdom in the excess of male over female births in 1869, exhibited in 1868 the exact reverse, the proportion then being 94·3 males to 100 females. This fluctuation in small numbers is fully in accordance with theory.

*Seasons.*—Births are generally most numerous in the first quarter. They were unusually high in the first quarter of 1869, the numbers were 203,775, 188,618, 190,394, and 190,594 in each quarter respectively.

*Children born out of wedlock.*—The proportions of males to females born in and out of wedlock present some remarkable variations; thus in Middlesex (extra-metropolitan) only 100·3 males to 100 females were born in wedlock, while no less than 128·6 males to every 100 females were born out of wedlock.

In Shropshire the proportions born out of wedlock were reversed, for 88·1 males only were born to 100 females. The counties showing the greatest excess of illegitimate males to females are Surrey (extra-metropolitan), Northampton, Worcester, Rutland, Northumberland, Cumberland, Dorset, and Middlesex (extra-metropolitan), ranging from 115 to 128·6.

Norfolk, North Wales, Sussex, Hertford, Westmorland, the North Riding of Yorkshire, Hants, Essex, Gloucester, and Kent (extra-metropolitan), exhibit an excess of less than two per cent.

Shropshire, Hereford, Leicester, and Derby show, on the contrary, an extraordinary excess of illegitimate females, ranging from 12 to 6 per cent. over males.

1858	655,481	612,176	43,305	104·5	104·4	106·2	6·6
1859	689,881	645,130	44,751	104·6	104·5	105·7	6·5
1860	684,048	640,355	43,693	104·7	104·8	102·9	6·4
1861	696,406	652,249	44,157	104·6	104·5	106·1	6·3
1862	712,684	667,462	45,222	104·1	104·1	103·4	6·3
1863	727,417	680,276	47,141	104·7	104·6	106·3	6·5
1864	740,275	692,827	47,448	104·2	104·2	104·4	6·4
1865	748,069	701,484	46,585	104·0	104·0	103·9	6·2
1866	753,870	708,369	45,501	104·3	104·3	104·8	6·0
1867	768,349	723,103	45,186	104·3	104·2	105·7	5·9
1868	786,858	740,520	46,338	103·6	103·5	104·7	5·9
1869	773,381	728,690	44,691	104·2	104·1	105·0	5·8

The causes of the disparity in the facts where the numbers are small may be accidental, but many of the variations depend upon causes which have yet to be explained.

The number of illegitimate children was 5·8 in every 100 births registered.

The true proportion is probably somewhat higher, as in many cases the mother endeavours to evade the registration of her child as illegitimate. The difficulty of concealment in rural districts renders the return of illegitimacy in some counties very complete. In Cumberland the average

1868	196,714	1000	1015	1036	974	975
1869	193,345	1000	1037	978	977	978

\* The three months January, February, March, contain 90, in Leap Year 91 days; the three months April, May, June, 91 days; each of the two last quarters of the year 92 days. For this inequality a correction has been made in the calculations.

## DEATHS.

In the year 1869 the deaths registered in England were 494,828, showing a further increase of 14,206 upon the numbers returned in the two preceding years. After allowing for increase of population the rate of mortality was 23 per 1000 against 22 both in 1867 and 1868. In the 32 years 1838-69 the average annual rate was 22·4 per 1000; the lowest rates being 20·5 and 20·8 in 1856 and 1850, and the highest 25·1 in 1849, the year of the severe cholera epidemic.

The deaths referred to zymotic diseases showed a considerable decrease upon those in 1868; the deaths from diarrhoea had declined nearly 10,000, thus more than counterbalancing the increase in the fatality from scarlet fever. The increase of deaths in the year appears to have been almost entirely due to the greater fatality from diseases of the respiratory organs, including phthisis, which caused 132,667 deaths in 1869 against 114,526 in 1868, or an increase of no less than 18,141. The causes of death in 1869 are considered in detail in Dr. Farr's letter in the Appendix, pp. 215-20.

*The Seasons.*—The meteorological characteristics of 1869 were not so marked as those of 1868. The temperature in the first quarter of the year, at the Royal Observatory, Greenwich, was 41°·3, or 2°·8 above the average for the same period of 98 years; in the second or spring quarter the mean was 52°·0, almost corresponding with the average; in the third 61°·4 and 1°·9 above the average, although 2°·5 lower than

1868	23·63	20·86	106	113
1869	24·16	21·19	106	114
Average of 32 years, 1838-69	23·36	21·48	104	109

The Table may be read thus:—In the year 1838 to every 1000 males living there were 23·42 deaths of males; to every 1000 females living there were 21·46 deaths of females; and to every 100 females who died there were 105 deaths of males. The last column shows the *relative mortality of males and females*; and that out of equal numbers living the deaths of males were 109 to every 100 deaths of females in 1838.

in the same period of 1868 ; in the fourth quarter it was  $43^{\circ}\cdot 0$ , and but slightly below the average. The rain-fall of the year was  $24^{\circ}\cdot 0$  inches, and  $\cdot 4$  of an inch below the average in 54 years ; of this  $6\cdot 6$  inches fell in the March quarter, showing an excess of  $1\cdot 6$  inches ; in the last three quarters of the year the quantity measured was  $5\cdot 5$ ,  $4\cdot 9$ , and  $7\cdot 0$  inches respectively, each showing a deficiency which was largest in the summer months.

44	North Wales	- - - -	20·47	22·25	20·98	21·89	21·71	22·14	22·07	23·65	22·02	21·02	21·82	21·84

In the four quarters of the year the annual rate of mortality was respectively 24·8, 21·8, 20·8, and 23·2 per 1000 of the estimated population; in the first three quarters of the year the mortality differed but slightly from the mean rate in the corresponding quarters of the years 1838-69. The excess in the last quarter was due to the fatality from diseases of the respiratory organs. Of 4000 deaths in 1869, 1090 were recorded in the first, 964 in the second, 919 in the third, and 1027 in the fourth quarters respectively.

*Sex.*—Of the 494,828 deaths registered in 1869, 254,863, or 51·5 per cent., were of males, and 239,965, or 48·5 per cent. of females. The deaths of males were to the deaths of females as 106 to 100.

From various causes the females considerably exceed the males in the English population, but of equal numbers living 114 deaths of males in 1869 were registered to every 100 deaths of females. In the 32 years 1838-69 this proportion averaged 109, and since 1849 has steadily increased from 105 to the 114 shown in 1869. The mortality among males in England always exceeds that of females; in the 30 years 1838-67 the

annual death-rate of males averaged 23·3 per 1000, while it did not exceed 21·5 among females. Except at the child-bearing ages the mortality among males exceeds that among females at each period of life, the largest excess occurring in male children under five years of age, who, in the 30 years above mentioned died at the rate of 72·4 per 1000 living at those ages, while among female children the rate did not exceed 62·5 per 1000. This excessive death-rate among male children is not so easy of explanation as the higher death-rates which also prevail among males at mature and old age, when they are exposed to the unhealthy and dangerous risks of workshops and manufactories, and of excessive bodily toil, inducing a variety of bodily ailments. Females are not exposed to these risks in anything like the same proportion as males, a certain proportion of women, however, die in childbirth.

*Locality.*—The mortality of England and Wales in 1869, as before stated, was at the rate of 22·6 per 1000 persons estimated to be living ; in the ten years 1859–68 the rate had averaged 22·5. The uncertainty attaching to the estimates of population in counties affects their rates, which are, therefore, only given as provisional. Taking them as they stand, in the several

counties of England during 1869 the lowest rates were 17·8 in Westmorland, 17·9 in Rutland, 18·2 in Surrey (*extra-metropolitan*), and 18·4 in Dorset; the highest rates were 24·0 in Leicester, 24·6 in the London division, 24·7 in the East Riding of York, 26·3 in Lancashire, and 26·7 in the West Riding of York. Compared with the average rate in the ten previous years the death-rate in 1869 was considerably below the average in Staffordshire and Northamptonshire, while the largest excess was shown in Berkshire and Yorkshire. It will be seen that the mortality in different parts of England is to a great extent governed by the proportions of large town populations which they contain; and with the increase of those proportions in Lancashire and Yorkshire in recent years the death-rates have steadily increased. The dwellers in large towns not only suffer from the effects of over-crowding in dwellings, and other sanitary shortcomings, but are likewise exposed to greater risk from the various forms of mechanical and other injuries which result in what are classified as “violent deaths,” than are those living in the smaller towns and in rural districts.

*Towns.*—The relative mortality prevailing in towns can only be satisfactorily calculated when the number of the population may be fixed with approximate accuracy. Estimates of population to the middle of 1869, especially in the larger towns, are in so many instances open to suspicion, that it is well to postpone consideration of the death-rates calculated thereon until the revised numbers obtained at the recent Census (1871) are available. It will be safe, however, to observe a few of the results from a comparison of the facts. The deaths in the 11 largest English towns, including London, showed a slight increase upon those in 1868. This increase was largest in Bristol, Salford, and London, while the numbers in Birmingham, Manchester, and Leeds had considerably declined; the sanitary condition of the last two boroughs showed especial improvement.

\* For mode of reading this Table, see Note to Table 19.

NOTE.—The Population used in the above calculations is deduced from the ascertained rate of increase observed in the 20 Years 1841-61.

*Mortality at different ages.*—It is advisable to postpone any detailed consideration of the mortality at the different groups of ages until the results of the 1871 Census furnish the means of ascertaining the proportions of the population living at the several groups of ages. The unusually high temperature during the summer of 1868 caused an exceptional mortality among children from diarrhoea. In 1869, although the deaths at all ages showed an increase upon 1868 of 14,206, the deaths of infants under one were 120,274, and 1801 less than in 1868. Of children under five years of age 203,562 deaths were registered in 1869, or 41·1 per cent. of the total deaths; in the two preceding years the proportion was 40·0 and 42·3 per cent. respectively. The deaths of children over five years showed an

The Table may be read thus :—Of 1000 males living at the ages 35 and under 45, 13·58 died in 1838, 12·65 in 1839, and 11·62 in 1850; the average annual rate in the 30 years, 1838–67, among the aggregate of males in this decennial period of age was 13·03.

† The ages of the people have not been ascertained since the Census in 1861. There are no means, therefore, of determining, with any degree of accuracy, the relation which the deaths now bear to the population at the several ages in the above Table. Under these circumstances it has been considered expedient to discontinue publishing the rates of mortality at the different ages, until the results of the enumeration in 1871 are ascertained. The rates of mortality at each age for the years 1868 and 1869 are therefore omitted in Tables 19 and 21. The deaths registered at the several ages are, however, given in Tables 16 and 17.

excess in 1869 partly owing to the fatal prevalence of scarlet fever ; while between 15 and 55 the deaths showed a somewhat lower proportion than in 1868. The principal excess of deaths in 1869 occurred among elderly persons ; at the ages 55 and upwards 135,229 deaths were registered, or 27·3 per cent. of the total deaths, while in 1868 the number did not exceed 125,522, and the proportion was 26·1 per cent.

The proportions of deaths occurring at the different groups of ages varies very considerably in the two sexes. Of the 254,863 deaths of males registered in 1869, 109,012, or 42·8 per cent. were of children under five years of age ; these included 66,691 or 26·2 per cent. of infants under one year of age. The deaths of females in 1869 under five years of age were 94,550 out of the 239,965 deaths at all ages ; the proportion of female children under five was therefore 39·4 per cent. ; of these 22·3 per cent. or 53,583 deaths were of infants under one year of age. The proportion of deaths of young male children, therefore, considerably exceeded that of females, especially under one year of age. Of male children between 5 and 15 years of age 16,020 deaths were registered in 1869, or 6·3 per cent. of the total male deaths ; the deaths of female children at those ages were 15,324 or 6·4 per cent. Between 15 and 55 the male deaths also exceeded those of females, although from 15 to 35, including the principal child-bearing ages, the deaths of females somewhat exceeded those of males. The deaths of males from 15 to 55 in 1869 were 63,389 or 24·9 per cent. of the deaths at all ages ; those of females were 61,304 or 25·5 per cent. The males, aged 55 years and upwards, who died in 1869 were 66,442 or 26·1 per cent. ; the females 68,787 or 28·7 per cent. of the deaths of females at all ages. The greater longevity among females is especially shown at the extreme ages ; at 95 years and upwards only 166 deaths of males were registered in 1869, while the females at those ages were 402. Aged 100 and upwards the deaths of 26 males and 53 females, in all 79 persons, were reported in 1869 against 63 in 1868. The highest ages said to have been attained in 1869 were 106 by a male, and 107 by a female.

\* See Note to Table 19.

*Deaths in Public Institutions.*—During the year 1869 there were 41,263 deaths recorded in 1002 of the largest public institutions of England and Wales. Of these institutions, 689 were workhouses, 241 were hospitals and infirmaries, and 72 were lunatic asylums. Of each hundred deaths registered in England and Wales during 1869, 8·3 occurred in large Public Institutions, of which 5·6 were recorded in workhouses, 2·0 in hospitals, and ·7 per cent. in public lunatic asylums. The proportion of deaths in Public Institutions varied very considerably in the different registration Divisions; in the London Division 15·8 per cent. of the total deaths were returned in the larger public institutions; in the South-eastern Counties, Surrey (extra metropolitan), Kent (extra metropolitan, Sussex, Hampshire, and Berkshire, the proportion was 9·6 per cent. and in the North-western counties, Lancashire and Cheshire, it was 8·5. The smallest proportions were 5·1 per cent. in the Northern, 5·0 in the North Midland, and 3·8 in the Welsh registration divisions. The proportion of deaths recorded in workhouses throws some light upon the varying extent of pauperism in different parts of England and Wales. As stated above 5·6 per cent. of the deaths registered in England and Wales during 1869 occurred in workhouses. In London the per-centage

Mean Annual Rate per 1000 in each Quarter					25·02	22·18	20·62	21·85

\* These rates may be read thus, without reference to the decimal points:—In the March quarter of the year 1838, to 100,000 of the population there were 2,615 deaths registered. The three months January, February, March, contain 90, in Leap year 91 days; the three months April, May, June, 91 days; each of the two last quarters of the year 92 days. For this inequality a correction has been made in the calculations.

1868	120,156	1000	1001	921	1081	997
1869	123,707	1000	1090	964	919	1027

\* The three months January, February, March, contain 90, in Leap year 91 days; the three months April, May, June, 91 days; each of the two last quarters of the year 92 days. For this inequality a correction has been made in the calculations.

was 9·1, in Lancashire and Cheshire 6·9, in the South Eastern Counties 6·8, and in the Eastern Counties 6·0 ; the smallest proportions were 3·7 in Yorkshire, 3·6 in the North Midland Counties, 3·5 in the Northern Counties, and 2·9 per cent. in Wales. In a considerable number of the Welsh Unions there are no workhouses, only out-door relief being given ; this in a great measure accounts for the small proportion of deaths being recorded in the workhouses of the principality.

Further details relating to the marriages, births, and deaths in 1869, with remarks upon the sanitary condition of districts, and other matters, will be found in the Quarterly Reports which were published within a month after the expiration of each of the quarters of the year. (See pp. xxxix-lvi.).

THE UNITED KINGDOM.

The population of the United Kingdom at the middle of the year 1869 was estimated at 30,611,305. After correction for defective registration in Ireland, by authority of the Registrar General of that portion of the Kingdom, the persons married in the year were 487,682, the births were 1,082,537, and the deaths 695,902. The natural increase to the population of the Kingdom during the year, by excess of births over deaths, was 386,635. After deducting 190,716 emigrants of home origin, this number is reduced to 195,919, while in 1868 it was 288,221.

The marriage-rate for the United Kingdom in 1869 was 15·9, the birth-rate was 35·4, and the death-rate 22·7 per 1000 of the estimated population.

TABLE 24.—Estimated **Population, Marriages, Births, and Deaths** in the **United Kingdom**, in the Year **1869**.

—	AREA IN STATUTE ACRES.	AREA IN HECTARES.	Estimated POPULATION in the middle of the Year 1869.	MARRIAGES.	PERSONS MARRIED.	BIRTHS.	DEATHS.
UNITED KINGDOM	77,286,901	31,275,782	30,611,305	243,841	487,682	1,082,537	695,902
Great Britain - -	56,964,260	23,051,796	25,075,088	199,053	398,106	886,776	570,617
England and Wales -	37,324,883	15,104,307	21,869,607	176,970	353,940	773,381	494,828
Scotland - - -	19,639,377	7,947,489	3,205,481	22,083	44,166	113,395	75,789
Ireland - - -	20,322,641	8,223,986	5,536,217	? 44,799	? 89,598	? 195,779	? 125,264

*Note.*—The registered Marriages, Births, and Deaths for Ireland were 27,277, 145,659, and 89,573 respectively. By the authority of the Registrar General of Ireland these numbers have been corrected in the above table for defective registration. It has been assumed that the marriages, births, and deaths in Ireland in the year 1869 were in the same proportion to population as the marriages, births, and deaths in England.

TABLE 25.—**Proportion per 1000 of Marriages, Births, and Deaths** to the Population of the **United Kingdom**, in the Year **1869**.

—	ACRES TO A PERSON.	HECTARES TO A PERSON.	TO 1000 PERSONS LIVING.			
			MARRIAGES.	PERSONS MARRIED.	BIRTHS.	DEATHS.
UNITED KINGDOM - -	2·52	1·022	7·97	15·94	35·36	22·73
Great Britain - - -	2·27	·919	7·94	15·88	35·36	22·76
England and Wales - -	1·71	·691	8·09	16·18	35·36	22·63
Scotland - - - - -	6·13	2·479	6·83	13·78	35·38	23·64
Ireland - - - - -	3·67	1·485	? 8·09	? 16·18	? 35·36	? 22·63

*Note.*—The total area of a country, divided by its population, gives the average area to each person. The reciprocal gives the “density” of the population, or the population to each acre, square mile, or other measure.

The marriage-rate in Scotland was only 13·8 per 1000, against 16·2 in England and Wales. The birth-rates in these two divisions of the country were, however, almost identical, 35·36 in England and Wales, and 35·38 in Scotland. The death-rate per 1000 in 1869 was 23·6 in Scotland, or one per 1000 higher than in England and Wales.

In estimating the numbers of marriages, births, and deaths registered in Ireland, it has been assumed that the respective rates were the same as prevailed in England and Wales.

AREA IN STATUTE ACRES.								
—	226,684		180,000		28,717		17,967	

Note.—The above numbers have been compiled from returns furnished to the Registrar General by Lieutenant-Colonel J. F. Murray, Government Secretary of Jersey, Colonel W. Bell, Government Secretary of Guernsey, &c., and by Mr. S. Harris, Registrar General of the Isle of Man. The returns for Guernsey and adjacent islands are imperfect owing to certain denominations neglecting to register the births and deaths.

\* The estimated decrease in the population of Guernsey and adjacent islands between 1869 and 1870 was confined to Alderney, and arose from the partial cessation of the government works in that island.

## FOREIGN STATES.

In consequence of the disturbed state of France from external and internal wars the usual returns have not been received showing the marriages, births, and deaths returned in 1869 among the population of that country, which was estimated to the middle of that year at 38,481,444.

In the Austrian empire the marriage-rate during 1869—that is, the rate of persons married—was 20·74 per 1000 of the population; this considerably exceeded the rate in recent years, and was 4·56 per 1000 higher than the rate in England and Wales for the same year. The birth and death rates also showed a considerable excess, and were 41·99 and 29·58 respectively in Austria during 1869 against 35·36 and 22·63 in England and Wales during the same year.

Italy with an estimated population of 25,766,217 shows a marriage-rate for 1869 of 15·94; the birth-rate was 36·95, and the death-rate 27·70 per 1000 of the population.

No returns have been received from Spain relating to the marriages, births, or deaths in that country during 1868 or 1869.

1869	21,869,607	38,481,444	21,412,564

\* M. LEGOYT, late director of the Statistical Department of France, favoured the Registrar General with the returns of France for the years 1853–61 and for the year 1866. The population in the four years 1862–65, and in the years 1867–69 has been estimated by means of the average annual rate observed between the two enumerations of 1861 and 1866.

† Including the three last annexed departments, viz., Savoie, Savoie (Haute), and Alpes-Maritimes.

‡ The Registrar-General has, from time to time, been indebted to the Chief of the Statistical Department of Austria for the figures relating to that empire. The population returned above includes Hungary, Croatia, Slavonia, and Transylvania from 1853 to 1862 inclusive. From 1863–68 inclusive the population of Hungary, Croatia, Slavonia, and Transylvania is excluded. From 1863 to 1864 the States of Italy are included; from 1865 to 1869 they are excluded. Baron HOHENBÜHEL, in furnishing to the Registrar-General the figures for 1869, states that they are derived from the Census enumeration carried out on the last day of December in that year, showing that the population of Hungary, and its annexed territories, was 14,326,334, thus giving 35,738,928 as the inhabitants of the entire empire.

**TABLE 28.—Number and Proportion of Marriages, Births, and Deaths in England, France, and in Austria, per 1000 of the Population, 1853–69.**

(The returns relating to France were supplied by M. LEGOYT, late Director of the Statistical Department of France. Those relating to Austria have been supplied by the Chief of the Statistical Department of Austria, from time to time.)

\* The returns for France in the years 1861 to 1866 include the three newly annexed departments. The deaths of Frenchmen abroad—civil or military—are registered in the books of the commune in which was their last domicile. M. Legoyt revised the population and the numbers of marriages, births, and deaths for the years 1853–65.

† The returns for Austria include Hungary, Croatia, Slavonia, and Transylvania from 1853 to 1862 inclusive. From 1863–68 inclusive the returns are exclusive of Hungary, Croatia, Slavonia, and Transylvania. From 1853 to 1864 the States of Italy are included; from 1865 to 1869 they are excluded. For the years 1860–62 the numbers for Hungary and its annexed territories were estimated. Baron Hohenbühel, Chief of the Statistical Department of Austria, expresses a hope that the Hungarians will no longer neglect the statistics of Marriages, Births, and Deaths in their portion of the empire.

‡ In France in 1865 and 1866 cholera was prevalent.—(M. Legoyt.)

§ Dr. Ficker attributed the excessive mortality in the year 1866 to cholera and war.

**TABLE 29.—Italy** (inclusive of VENETIA). **Population, Numbers, and Proportions** per 1000 of **Marriages, Births, and Deaths**, in each of the Years **1863 to 1869**.

(Supplied by Dr. MAESTRI, Chief of the Statistical Department of Italy.)

\* The decrease of marriages in 1866 may be attributed to the law which then came into operation removing the civil registration from the parochial authorities to the communes; there had been a marked increase in the previous year resulting from a wish to evade the law about to come into operation. Doubtless many of the marriages solemnized in the churches during 1866 escaped registration.

NOTE.—The Population enumerated at the Census of 1860 was 15,673,536. The estimated Population for the Years 1861-7 has been deduced from the Excess of Births over Deaths in each Year. This method of estimating the population is sanctioned by the Junta General de Estadística. No returns have been received for the two years 1868-9.

## THE BRITISH ARMY.

During the year 1869 the average strength of the British Army at home and abroad, as shown by the returns with which I have been favoured by His Royal Highness the General Commanding in Chief, was 186,668.

At home the average strength was 86,278 officers and men; and the deaths from all causes were 903, of which 28 occurred among officers, and 875 among non-commissioned officers and men. The ratio of deaths per 1000 of the mean strength at home was 5·91 in the former, and 10·73 in the latter.

In Great Britain the death-rate of officers was 5·83, and of non-commissioned officers and men 11·62 per 1000, of the mean strength. In Ireland the respective rates were 6·18 and 8·06 per 1000. Compared with the results for the previous year the ratios showed a great reduction in the mortality of all ranks at home, the only increase being among officers stationed in Ireland.

The average strength of the army abroad in 1869 was 100,390; the deaths were 2347, viz., 65 officers and 2282 non-commissioned officers and men, yielding a death-rate per 1000 of the mean strength of 11·88 in the former, and 24·04 in the latter.

Compared with the results for 1868 there is a decrease in the mortality of officers, and a large increase in that of non-commissioned officers and men, of the British army abroad.

BIRTHS AND DEATHS OF BRITISH SUBJECTS AT SEA.

The strength of the mercantile marine decreased from 197,502 in 1868 to 195,490 in 1869. The number of deaths reported to the Registrar General of Seamen during the year was 4832 or 24·7 per 1000 of the strength. A statement of the deaths from different causes, compiled from a return furnished by the Registrar General of Seamen, is given at page lxvi., the following causes accounting for five-sixths of the 4832 deaths :—Drowned by wreck 1770, drowned by accident other than wreck 1069, other accidental deaths not by drowning 277, fever 291, consumption 165, yellow fever 162, dysentery 157, and cholera 137 ; the deaths from scurvy, which were 52 in 1867 and 26 in 1868, fell to 9 in 1869. There were 21 deaths

TABLE 40.—Number of Births and Deaths of British\* Subjects at Sea, exclusive of Soldiers, Marines, invalided Seamen from the Royal Navy, and Seamen on Ships' Articles, in the Years 1856-1869, reported by the Captains or Commanding Officers of Vessels to the Registrar General of Seamen at the Termination of their respective Voyages in Ports of the United Kingdom.— (Furnished to the Registrar General by the Registrar General of Seamen.)

\* British subjects are not particularly described in these returns, but foreign names have been excluded. A column headed *Place of Birth* was formerly contained in these returns, for the purpose of distinguishing passengers as British subjects or Foreigners, but in many cases it was not filled up by masters, in consequence of their inability to obtain the information after the death had taken place. British and Foreign seamen are distinguished.

† The deaths of soldiers, marines, and seamen from the Royal Navy, who were passengers in British Merchant Ships, were 33 in 1856, 59 in 1857, 156 in 1858, 196 in 1859, 196 in 1860, 69 in 1861, 122 in 1862, 116 in 1863, 96 in 1864, 140 in 1865, 184 in 1866, 97 in 1867, 81 in 1868, and 51 in 1869. The number is 1,593 in fourteen years, which, if added to the 7,699 above, makes 9,295, the total number of deaths of British subjects at sea in 1856-69, exclusive of those of merchant seamen.

from murder and manslaughter and 15 from suicide. Of the total deaths 941 occurred at ages under 21 years, 2752 at ages 21 and under 41, 432 at ages 41 and upwards, and 707 at unknown ages.

The number of births and deaths among British subjects at sea reported to the Registrar General of Seamen in 1869, exclusive of seamen, soldiers, and marines, amounted to 258 and 502 respectively.

#### MARINE REGISTER BOOK.

By the Registration Act and the Passengers Act captains or commanding officers of British vessels are required to transmit to me the particulars of all births and deaths that occur at sea amongst English subjects. The entries for 1869 in the Marine Register Book which is kept by me are 89 births and 240 deaths, the returns, however, as appears from the numbers reported to the Registrar General of Seamen, are by no means complete.

#### NAMES ON THE REGISTERS AND SEARCHES.

The names of all persons whose marriages, births, or deaths have been recorded in the registers during the 32½ years, from the middle of 1837 to the end of 1869, amounted on the 31st December in the latter year to 43,675,035, of which 1,622,149 were entered in 1869.

The means thus afforded of obtaining evidence of births, deaths, or marriages are each year used to a greater extent, as is shown (*see* Table 42) by the constant increase in the number of searches made at the Central Office. In 1869 the searches in the indexes prepared under the Registration Act were 13,326, and the certificates given 11,503; the searches for non-parochial registers were 929, and the certificates granted 724. The searches made in 1869 showed an increase of 1400 upon those in 1868. The total

\* Deduced from a return of the number of accounts of wages and effects of seamen (exclusive of masters) dying before the termination of the voyage, received by the Registrar General of Seamen. Since 1867 the return includes seamen dying ashore in foreign parts, whose wages and effects are delivered to the consuls or officers of the hospitals on their discharge from their ships.

If a seaman dies on the passage from Sunderland to Calcutta, his death is reported at Calcutta, and his wages and effects are accounted for and transmitted home, if the vessel is not to return direct to the United Kingdom. But if a passenger dies on board a ship which does not return to a British port immediately, but trades for a time in foreign parts, considerable delay may occur before his death is reported. In all cases, however, the date is given, and in the accompanying tables the births and deaths are classed according to the years in which they occurred. In some passenger-ships women are employed as stewardesses, and are counted as part of the crew. They therefore form part of the strength in this Table, and if the death of a stewardess occurs in the course of a voyage, it is included in the column of Deaths.

When a ship is lost with all persons on board, the owners return the number and names of the crew, and the names of the passengers, when known, to the Registrar General of Seamen.

amount received in fees for searches and certificates, and paid into the Exchequer, was 203*l.* 11*s.* The numerous certificates of births furnished for purposes connected with the Factory Acts, being given free of charge, are not included in the above.

The return of the Chief Registrar of the Court of Probate shows that the number of probates and letters of administration granted at the principal registry in the year 1869 was 14,674. The value of the effects was sworn under 60,869,055*l.* The returns furnished by the district registrars show that the number of probates and letters of administration granted in the 40 district registries in the same year was 23,388. The value of the property under which these probates and administrations were sworn was 40,025,714*l.* At the principal Registry and the district Registries the total number of probates in 1869 was therefore 38,062, and the value of the effects was sworn under 100,894,769*l.*; in 1868 these figures were 36,292 probates, and the value 94,040,261*l.*

A report on the Causes of Death in England in 1869, addressed to me by Dr. Farr, will be found in the Appendix, pp. 215-20, and accompanying the usual abstracts are detailed tables of considerable interest relating to the violent deaths, and to the deaths registered in the large public institutions during the year 1869.

I have the honour to be,

Sir,

Your faithful servant,

GEORGE GRAHAM,

*Registrar-General.*

NOTE.—The numbers registered in 1837 are for the Half Year ending December 31st.

*Summary of the Quarterly Reports, 1869.**First Quarter.—January, February, March.*

In the United Kingdom the births of 270,799 children, and the deaths of 179,814 persons of both sexes, were registered in the three months ending on March 31st. The recorded natural increase was 90,985; the native emigrants were 23,612.

The number of persons married in the quarter ending March 31st, 1869, was 106,448.

The death-rate of the Kingdom differs little from that prevailing in England and Wales.

The resident population of the Kingdom in the middle of 1869 is estimated at 30,621,431; that of England and Wales amounting to 21,869,607, of Scotland to 3,205,481, and of Ireland to 5,546,343. The corrected death-rate of the quarter is 24·9 per 1000; the birth-rate 37·7; the marriage-rate 16·4.

The several facts concerning Scotland and Ireland are recorded in the quarterly reports of the Registrars General of those parts of the kingdom.

*England.*—After a season of depression, which extended over a period of two years, the marriage-rate rallied in the first quarter of the year 1869. The births, allowing for increase of population, were numerous beyond example. The mortality was slightly below the average of the season, but as many places continued to suffer from an epidemic of scarlet fever the quarter cannot be classed as healthy. The death-rate exhibited an increase over the winter quarter of 1868, when the mortality was exceptionally low.

*Marriages.*—The marriages in the three winter months of January, February, and March, are always less numerous than in any other season of the year, but 75,504 persons married in that quarter of the year 1869, or 2112 more than were married in the same period of 1868. This improvement implies that the people began to think more favourably of their prospects. There was an increase in the number of marriages in each of the eleven great divisions of England, except in the South-western Counties, the North Midland Counties, and the North Western Counties, which exhibited a slight decrease as compared with the number in the corresponding quarter of last year. Marriages in Kent and Lincolnshire were depressed. A remarkable decline was observed in Saffron Walden, Yarmouth, Totnes, Bodmin, Stone, Basford, Bakewell, Liverpool, and Ecclesall Bierlow. The people married at the rate of 14·0 in 1000 of the population, whilst the average of the corresponding quarter of the last 10 years was 14·1. The proportional numbers in the same period in 1867 and 1868, respectively, were 13·8 and 13·6.

*Births.*—The number of births registered in the first three months of 1869 was 203,775, being 5191 in excess of the number registered in the winter quarter of the year 1868. In London there was a slight decrease, the births having declined from 29,857 to 29,293 in the winter quarters of 1868-9. In all the other great divisions there was an increase in the absolute numbers. Passing on to counties it appears there was a decrease in Sussex, Bedford, Rutland, Lincoln, and Westmorland. The deficiencies, however, were small, excepting in the case of Bedford, where it may be the consequence of the removal of families dependent on the straw plait manufacture. The annual birth-rate of England in the quarter was 38·0

per 1000 of population, against an average of 36·9. Arranging the fourteen large towns of the United Kingdom according to their respective birth-rates the following is their order of precedence: Leeds 42·8, Newcastle-on-Tyne 41·5, Glasgow 41·5, Sheffield 41·1, Salford, 39·5, Edinburgh 39·2, Bristol 38·8, Liverpool 38·7, Birmingham 38·4, Manchester 38·2, Bradford 37·9, London 37·5, Hull 33·7, and Dublin 28·7.

*Increase of Population.*—As the births in the first quarter of the year amounted to 203,775, and the deaths to 133,096, the natural increase of population in England and Wales in the 90 days was 70,679. This addition, however, to the population of the country was reduced by emigration.

The number of emigrants from ports in the United Kingdom was 30,275, of whom about 11,110 were English by origin, 2702 were Scotch, 9800 were Irish, and 6663 were foreigners. Of the total number 26,900 chose the United States for their destination, 2713 the Australian Colonies. Of the 9800 Irish emigrants, 8964 went to the United States. The number of Irish who emigrated during the quarter was 2332 less than in the winter of 1868; in the total number of emigrants in the quarter there was an increase of about 4289, which is accounted for by the excess in the English, Scotch, and foreign emigrants.

*Prices, Pauperism, and the Weather.*—The price of wheat, thanks to a bountiful harvest, fell from 72s. 2d. per quarter in the first three months of 1868 to 50s. 2d. in the first three months of the year 1869, representing a marked decrease of 30 per cent. Potatoes were also 29 per cent. lower in price than in the winter of 1868. The mean price per ton for the best quality at the waterside market in Southwark in each of the three winter quarters of 1867–9 was 137s. 6d., 147s. 6d., and 105s. respectively. Beef as sold by the carcase at Smithfield market ranged from 4 $\frac{3}{4}$ d. per lb. for inferior quality to 7 $\frac{1}{4}$ d. for superior quality. Mutton was from 4 $\frac{3}{4}$ d. per lb. for inferior quality to 7 $\frac{1}{2}$ d. for superior quality. Both beef and mutton were dearer than in the winter quarter of 1868.

The pauperism returns for the quarter showed an increase of in-door paupers and a decrease of out-door paupers compared with the same period of 1868.

The months of January and February, with the exception of a short period extending from 19th to 25th of January, were remarkably warm. Up to March 1st the excess of temperature averaged more than 5 $\frac{1}{4}$ ° daily. On March 2d a change took place and a period of cold and wintry weather set in and continued until the end of the quarter. The average deficiency of temperature during this period exceeded 4° daily. The mean daily temperature of the quarter exceeded the average by more than 2°. At Greenwich the mean temperature of January was 41·1°, or 4·9° higher than the average of 98 years. The mean temperature of February was 45·3°, or 6·9° in excess of the average of 98 years; and it is necessary to go back to 1779 for a similar period of high temperature. The mild weather which prevailed in these two months was favourable to the grazier. By the end of February vegetation was remarkably forward, but the land was very moist, which impeded agricultural operations. The rainfall was 1·1 inch in excess of the average in January, and 0·7 inch in excess in February. Four-fifths of the rainfall of the quarter fell in the first two months. The mean temperature of March was 37·5°, or 6·5° colder than that of the same month in 1868, and 3·5° below the average of 98 years. During the greater part of this month there was an advantageous check on vegetation. Agricultural spring operations were generally in a backward state, and a great deal of ploughing and sowing remained to be done at the end of the quarter. The rainfall of the three months was 6·6 inches, or 1·6 inch in excess of the average. Six or seven inches were measured at Hull, Newcastle-on-Tyne, Edinburgh, and Leeds; amounts of from 7 to 10 inches at Sheffield, Birmingham, Dublin, Salford, and Bristol;

while at Glasgow the fall measured 11·19 inches. The highest mean temperatures for the quarter were recorded at Dublin 43·6°, Leeds 42·9°, Bristol 42·1°, and Liverpool 42·0°; the lowest at Newcastle-on-Tyne 38·7°, and Hull 39·1°; at Edinburgh and Glasgow the mean temperature was slightly below that of London, viz., 40·0° and 41·1°.

*Deaths ; and the State of the Public Health.*—The number of deaths registered in the first quarter of the year 1869 was 133,096, against 119,676 in the winter quarter of 1868, the respective death-rates of the seasons being in the annual proportion of 24·8 and 22·3 per 1000 of population. The winter of 1868 was therefore a healthier season to the people of England than that of 1869. The fine weather which prevailed in the first quarter of the year 1868 had a remarkable influence on the mortality ; fever and diseases incidental to childhood being much less fatal than usual. The winter of 1869—although the mean temperature was in excess of the average—was not so favourable to the public health, for, in addition to an epidemic of scarlet fever, trying and exceptional climatic conditions prevailed. The weather in the beginning of January—as previously described—was very warm, but suddenly turned cold for about a week, and swelled the number of deaths from bronchitis ; then a warm period set in and lasted until the beginning of March, when there was another change to wintry and ungenial weather, which continued up to the end of the quarter, and cut off many of the very young, the weakly, and the aged. The winter of 1869 affords another example of the effect of vicissitude of temperature on the health of the people, and warns those who are very susceptible to such variations to endeavour, in their manner of life, to counteract in some measure the severity of the climatic changes experienced in an English winter. The period of life when the greatest susceptibility to a fatal attack of bronchitis exists is after 65 ; but at the age 45 and under 55 the increase is remarkable ; as also is the high rate of mortality in infancy. The average annual death-rate from bronchitis in six recent years among males, was 4·42 per 1000 of population at the age under 5 years ; at the ages 5 and under 45 the mortality was comparatively inconsiderable ; at 45–55 it was 1·51 per 1000 ; at 55–65 it was 3·79 ; and continued to increase as age advanced, viz., 8·76 at 65–75 ; 16·14 at 75–85 ; 22·76 at 85–95 ; and 23·57 at the age of 95 and upwards.

If the prevalence or non-prevalence of zymotic elements in the metropolis may be taken as an indication that the same conditions exist over the whole of England, then the 648 deaths registered in London from scarlet fever during the first quarter of 1869—against 339 and 368 in the winter quarters of 1867–8—imply that the country was visited very severely by this epidemic in the winter of 1869. Whooping-cough and measles prevailed in many districts. The death-rate of the quarter under review was below the average of the season of the last ten years, and compares favourably with the rate observed in the three years 1864–6.

The annual death-rate of the quarter experienced by the people inhabiting the chief towns, where there were 37·9 persons to every ten acres was 26·55 per 1000 of population, against an average of 27·24, while the death-rate of persons residing in the small towns and country parishes, where the population to every ten acres only averaged 2·7, was 22·56 per 1000, against an average rate of 23·02. But where proper arrangements are adopted for adequate water supply and good drainage the evils which make dense districts so fatal can be mitigated.

As the mortality in the winter quarter is not so much influenced by the activity which a higher temperature gives to zymotic elements, perhaps the comparative salubrity of the fourteen large towns of the United Kingdom is not most strikingly shown by the annual death-rate of the quarter. Arranging them, however, in the order of their respective death-rates the

following is their position on the hygienic scale. Birmingham, with a population of 360,846, showed a death-rate of 20·7 in every 1000 persons; London, with 3,170,754, showed 25·4; Hull, with 126,682, showed 26·3; Bristol, with 169,423, showed 26·6; Bradford, with 138,522, showed 26·9; Leeds, with 253,110, showed 27·5; Salford, with 119,350, showed 27·8; Dublin, with 320,762, showed 29·1; Sheffield, with 239,752, showed 29·4; Liverpool, with 509,052, showed 29·6; Newcastle-on-Tyne, with 130,503, showed 30·4; Manchester, with 370,892, showed 31·0; Edinburgh, with 178,002, showed 33·0; and Glasgow, with 458,937, showed 40·1. Birmingham, in the West Midland Division, and London, enjoyed the greatest amount of health, and Edinburgh and Glasgow the least.

A comparison of the results for the eleven divisions of England shows that the south-eastern, where the mortality for the quarter was at the annual rate of 21·4 per 1000, was the healthiest. In Croydon scarlet fever caused 20 out of 321 deaths.

Mr. George Rigden, M.R.C.S., of Canterbury, to whose exertions that city is much indebted, reports upon its sanitary condition as follows:—During the year 1868 the prevalence among children of diarrhoea and abdominal diseases, which were general throughout the Kingdom in July, August, and September, raised the mortality above that of 1867. It was gratifying, however, to observe that although the deaths registered in each of the three years 1863–5 were as high as 515, 558, and 549, respectively, yet during the three years 1866–8 they were 497, 463, and 500, or less in the aggregate by 162 than in the three preceding years. This improvement may be justly regarded as the beneficial result of increased attention to sanitary arrangements, and cannot be attributed to mere chance. It should, however, be stated that the mortality of Canterbury has been considerably in excess of a healthy standard, and, with every advantage of unlimited water-supply, and great facilities for drainage, it will only be through lamentable neglect if a much lower rate of mortality is not ultimately attained.

The south-western and south-midland counties follow next in order of salubrity; their respective death-rates were 21·8 and 21·9.

The mortality of the eastern counties was 22·4; that of Monmouthshire and Wales, 23·1. At Holywell, the deaths exceeded the births by 30; scarlet fever was the cause of 33 deaths out of 125. This epidemic had raged in the sub-district for 15 months, but was now passing away; it had, however, been followed by measles. In the west-midland and north-midland counties the respective death-rates of the season were 23·6 and 24·4. The mortality was very high in Caistor, Mansfield, Basford, and Radford. In Basford the deaths rose from 394 to 605 in the respective winter quarters of 1868–9; in some parts of the district scarlet and typhoid fevers had been very prevalent. The northern counties show a mortality of 26·1. In the township of Cockfield in Teesdale 17 deaths occurred from typhus fever, which had prevailed to an alarming extent. The registrar stated that the bad sanitary condition of the place was sufficient cause of so serious an epidemic. At Barnard Castle, also in Teesdale, a fatal case of typhus occurred in the Union workhouse. The supposed cause of the disease was sewage matter in the wells that supplied the house with water for domestic use. There had been no further case since the pumps had been fastened up. Yorkshire showed the high death-rate of 28·1. In the sub-district of Brightside, in Sheffield, 30 deaths from small-pox were recorded; of these cases 21 were unvaccinated. In Sheffield, north sub-district, 19 fatal cases of small-pox were returned. The north-western counties also showed the high rate of mortality of 28·1. Rochdale experienced a high rate of mortality, scarlatina, typhus, and small-pox having prevailed. The registrar states that the authorities are actively exerting themselves in improving the sanitary arrangements, which it is hoped will have a beneficial effect on the health of the town.

*Second Quarter.—April, May, June.*

*In the United Kingdom* the births of 257,529 children, and the deaths of 162,534 persons of both sexes, were registered in the three months ending on June 30th. The recorded natural increase was 94,995.

The number of persons married in the quarter ending June 30th, 1869, was 108,726.

The death-rate of the Kingdom differs little from that prevailing in England and Wales.

The resident population of the Kingdom in the middle of 1869 is estimated at 30,621,431; that of England and Wales amounting to 21,869,607, of Scotland to 3,205,481, and of Ireland to 5,546,343. The corrected death-rate of the quarter is 22·1 per 1000; the birth-rate 34·8; the marriage-rate 14·9.

The several facts concerning Scotland and Ireland are recorded in the quarterly reports of the Registrars General of those parts of the Kingdom.

*England.*—The marriage-rate in the second quarter of the year 1869 was the lowest recorded in any corresponding season during the last quarter of a century. The birth-rate was also remarkably low; and the death-rate slightly below the average of the season.

*Marriages.*—86,404 persons married in the quarter that ended on 30th June. The marriage-rate was 15·8 or 1·4 below the quarterly average, thus the symptoms of increase in the marriage-rate which were noticed in the previous quarter subsided in the subsequent months, and the decrease would seem to indicate, that no steady improvement had at this period taken place in the means of the great bulk of the population of England. The Tables show that the decrease was spread over most of the counties and districts.

*Births.*—In the three months ending 30th June, the births registered were 188,618, against 202,839 in the same season of 1868. This decrease of 14,221 extended more or less over the whole country; the greatest proportional decrease was observed in the North Western Counties (Cheshire and Lancashire), where it reached 9 per cent. In the West Midland Counties the decrease was 8·4 per cent. In London it was 7·2 per cent. In the Eastern Counties it was 6 per cent., and it was 4·4 per cent. in the Northern Counties. In Canterbury the decrease was 34 per cent.; in Mansfield 31 per cent.; in Northleach it reached 38 per cent., and in Wolverhampton, Dudley, Stourbridge, Ashton-under-Lyne, Barnsley, and Ecclesall Bierlow, where the decline in the number of births was also remarkable, the local registrars reported that the decrease was owing to serious depression in the coal and iron trades. Many of the workmen were compelled to seek new fields of labour. The annual birth-rate of the quarter was 34·6 per 1000 of the population, against 37·6 in the same period of the previous year; the average of ten previous springs being 36·7. The birth-rate is the lowest on record since 1847, and only thrice in the last twenty-one years was there any approximation to it, viz., in 1848, 1853, and 1858; perhaps the chief cause of such an unusual feature in the returns may be sought in the depressed marriage-rate, which prevailed for eight consecutive quarters during the years 1867–68.

*Increase of Population.*—The excess of births over deaths in the quarter under review was 69,671. The natural increase of the population was, therefore, at the rate of 765 daily; which number, however, was considerably diminished by emigration.

*Prices, Pauperism, and the Weather.*—The price of wheat fell. The average price in the quarter ending 30th June was 45s. 7d. per quarter, which was less by 26s. 3d. than in the corresponding period of 1868; the reduction was 37 per cent. The average of the highest and lowest prices

of beef at Smithfield market was  $6\frac{1}{8}d.$  per lb.; and of mutton  $6\frac{3}{8}d.$  Both beef and mutton were  $\frac{1}{2}d.$  per lb. dearer than in the spring quarter of 1868. Best potatoes were 95s. per ton, which was 37 per cent. cheaper than they were at the same time in the year 1868.

The pauperism returns for the quarter show an increase of in-door and out-door paupers compared with the same period of 1868.

The meteorological character of the spring of 1869 is recorded in detail by Mr. Glaisher; he shows that the cold period which set in on the 2d of March continued until the 5th of April. On the 6th there was a change, and the only warm period of any duration during the quarter set in, and extended to the 29th; the mean daily excess of temperature for these 24 days was  $5\frac{1}{4}^{\circ}$ . From the 30th of April to 12th of May, there were alternations of cold and warm weather; but the cold predominated. On the 13th of May the weather turned colder, and so continued with trifling exceptions until the 1st of June, the cold being most intense towards the end of May. From May 13th to June 1st the mean temperature was  $3\cdot9^{\circ}$  in defect daily. The period from the 2d to the 8th of June, with the exception of the 4th day, was warm; on the 7th it was excessively warm, but on the 10th of June a remarkable period of severe cold weather set in, which lasted to the end of the month, some days being marked by exceedingly low temperatures. The average temperature of the month of April was  $4\cdot3^{\circ}$  in excess; only four instances of warmer Aprils are recorded; viz., in 1779, 1821, 1844, and 1865. The average temperature of the cold months of May and June was  $52\cdot9^{\circ}$ , or  $7^{\circ}$  less than that of the same period in 1868. Since the year 1770 there were only ten instances of lower temperature in these two months.

The wintry character of the month of March, with a temperature of  $37\cdot5^{\circ}$ , checked the progress of vegetation, but the genial weather of April, when the temperature rose to  $50\cdot3^{\circ}$ , caused vegetation to progress very rapidly, so that by the end of the month the prospects of the harvest were very good. The cold weather of May and June, with mean temperatures of  $50\cdot5^{\circ}$  and  $55\cdot3^{\circ}$  respectively, was most unfavourable, and by the end of the quarter all cereal crops were backward, and great uncertainty prevailed as to the yield. Only the early kinds of corn were in ear and blossomed by the end of June, but this was confined to the Southern counties, so there was every probability that the harvest would be late.

*Deaths; and the State of the Public Health.*—During the quarter ending 30th June the health of the country was good; a mild April followed by a cold May and June did not act very unfavourably on the public health. The deaths were below the average of the season, and the improvement would no doubt have been greater if the preceding March had been more genial, for many bronchial affections which commenced then, terminated fatally in the quarter now under review. The total deaths numbered 118,947 and were at the annual rate of 21·8 per thousand of population against an average of 22·0. The deaths were 8,937 in excess of those registered in the same period of the previous year, but the death-rate then was exceptionally low. In most of the South-eastern, South-midland, Eastern, and South-western counties of England the epidemic of scarlatina almost subsided, but only to be followed by measles and whooping-cough, so the benefit arising from exemption from one epidemic was counterbalanced by the outbreak of others. In the West Midland, North Midland, North-western, and Northern counties, and in Yorkshire and Wales, scarlet fever continued to reign epidemically, and some places suffered from small-pox.

In London small-pox and measles declined, as compared with the corresponding period of 1868, while scarlet fever and whooping-cough increased, as did also the deaths by bronchitis and pneumonia. The deaths in London in each of the two quarters ending 30th June 1868

and 1869 respectively were as follows: small-pox 187 and 55, measles 741 and 315, scarlet fever 352 and 675, whooping-cough 780 and 1177, bronchitis 1366 and 1655, and pneumonia 878 and 1001.

The annual rate of mortality in the population of the country districts was at the rate of 20·6 per 1000, the average rate being 20·3, while in the chief towns, where the inhabitants are in closer proximity to each other, the mortality was at the rate of 22·8 against an average of 23·4,—the benefit of the low death-rate being confined to the denser districts. The general mortality, however, is to a considerable extent made up of the deaths of children, and in comparing the mortality of town and country, without distinction of age, it must be borne in mind that the method is favourable to the towns, where there is an excess of persons at the ages when the mortality is comparatively low.

The returns contain some examples of the efficacy of hygienic measures, but much remains to be done to complete the sanitary defences of the Kingdom. In London and 13 other large towns the annual death-rate of the quarter was 24 per 1000. In Glasgow the mortality per 1000 of population rose from 29·5 in the second quarter of 1868 to 36·4 in that of 1869; in Edinburgh from 23·8 to 33·0; in Liverpool from 25·8 to 27·3; in Hull from 19·4 to 24·0; in Newcastle-on-Tyne from 21·9 to 24·0; in Leeds from 21·3 to 22·4; and in London from 21·9 to 22·3. In the following large towns the mortality fell, viz., in Manchester from 27·7 to 25·0; in Bradford from 25·1 to 24·7; in Sheffield from 26·3 to 24·5; in Salford from 25·9 to 24·2; in Dublin from 22·9 to 22·7; in Bristol from 23·3 to 21·6; and in Birmingham from 20·7 to 18·3.

The high rate of mortality in Glasgow is partly due to epidemic and other diseases, to which children succumbed in undue proportions to the rest of the population. While protection against the diffusion of cholera poison by means of an impure water supply has been secured in this city, the importance of aiming at immunity from other generating elements of disease should not be lost sight of. Glasgow is supplied with an abundance of good water, but other sanitary defences have been practically overlooked. Dr. Gairdner reports that the true causes of the excessive liability of this city to high tides of disease and death are to be sought chiefly in the low standard of domestic comfort, in overcrowding, general squalor, and physical degradation, which are the unhappy characteristics of a large section of the population. The city of Manchester, which is also supplied with an abundance of pure water, shows a high rate of mortality, but it is considerably lower than the Scottish city. Why cannot the administrative abilities, which have been so successful in commanding a pure water supply, be as successfully applied, not only in the demolition of old tenements, but in the erection of new constructions and improved house accommodation for the poorer classes, and also in enforcing the law against overcrowding?

The mortality of London steadily increased from 20·2 and 21·9 to 22·3 per 1000 in the three spring quarters of 1867–68–69. The preservation of the health of this vast city depends greatly upon an uncontaminated water supply; but the Thames and the Lea do not yet flow unpolluted. Recent and frequent analyses have proved that organic matter in the form of nitrates generated from sewage and animal refuse is found in these waters; and when the towns from Oxford downwards have completed the works required by the Act to enable them to discontinue discharging their sewage into the Thames, even then a certain diluted form of liquid sewage, after it has been used for purposes of irrigation, will filter off the land into the river and so render the water unsafe for domestic use unless this contamination can be destroyed in its course.

In 57 seaside sub-districts containing the principal English watering places the annual death-rate during the quarter was 20 per 1000. On the north-east coast Whitby and Scarborough showed a mortality of 23 and 21

respectively. On the east coast Yarmouth showed 23, and Lowestoft 15. On the south-east coast Margate showed 23, Ramsgate 27, Dover 16. On the south coast Hastings and St. Leonards showed 15, Eastbourne 12, Brighton 19, Worthing and Littlehampton 20, Isle of Wight 19, Weymouth 19, Torquay 19. On the south-west coast Ilfracombe showed 18. In South Wales, Tenby showed 20. In North Wales, Bangor and Beaumaris showed 22, Llandudno 27. On the north-west coast New Brighton showed 12, Blackpool 26.

Of 9 inland watering places contained in 17 sub-districts Tunbridge Wells showed a mortality of 20, Bath 22, Cheltenham 19, Harrogate 23. As there are no means of ascertaining with any degree of accuracy the present population of the English watering places, and as they are resorted to in different proportions by the healthy portion of the community as well as by invalids, the results must be taken only as an approximation to the true rate of mortality.

The mortality in the South-eastern counties was at the rate of 19 per 1000 of population. Measles was epidemic in some districts. In the South Midland counties some parts of Cambridgeshire suffered from the same epidemic, and the mortality was at the rate of 19. In the Eastern counties, where the death-rate was 21, measles and whooping-cough prevailed; at St. Matthew, Ipswich, 11 deaths from small-pox were registered. The South-western counties were also visited by measles and whooping-cough; at Lyme, Axminster, there were 500 cases of measles, 18 of which proved fatal; some districts in Devon and Cornwall suffered severely from the epidemic; the mortality from all causes was at the rate of 21. Passing on to the West Midland counties, where the death-rate was 20, the prevailing epidemics were measles and scarlet fever; at Evesham, out of 68 deaths during the quarter, 21 were referred to scarlet fever. In the North Midland counties scarlet fever and measles were prevalent, the mortality was at the rate of 22; at Saltfleet, Louth, small-pox was imported from Hull, but no fatal cases had occurred. In the North-western counties the death-rate was 24 per 1000; typhus, scarlatina, measles, and small-pox were fatal in several town districts. The deaths in the Liverpool workhouse, in the Mount Pleasant sub-district of Liverpool, were above 100 more than in the same period of the two previous years, owing chiefly to an epidemic of measles among children of German emigrants temporarily located in this institution; there were also 101 deaths from typhus, nearly all of which occurred in the workhouse. At Atherton, in Leigh, out of 147 deaths in the quarter 77 occurred from an epidemic of measles of a most malignant kind. At Tonge, in Chadderton, complaint was made of children afflicted with small-pox running in the streets at the time the eruption was discharging from their faces. At Royton, in Oldham, where the drainage was imperfect, typhoid fever was prevalent. Yorkshire still exhibited a high death-rate, viz., 25 per 1000. Scarlet fever and small-pox were the prevailing epidemics. At Brightside, Sheffield, 10 fatal cases of small-pox occurred, vaccination having been much neglected; of the number of children born from September 1868 to the end of February 1869, the Registrar reported that up to the 30th June 1869 some 250 remained unvaccinated. At Brompton and Osmotherley, in Northallerton, scarlet fever was very prevalent; the Registrar was of opinion that the disease might have been arrested if precautionary measures had been adopted; he reported that in one of the townships of Northallerton where scarlet fever broke out in a virulent form, it was, owing to the adoption of sanitary measures, confined to the dwelling in which it began. The mortality in the Northern counties was at the rate of 23; scarlet fever was epidemic in some districts of Durham, and in a village a few miles from Cockermouth, typhoid fever caused 5 deaths, 3 of which occurred in one house; upon inquiry, a cesspool used by a butcher for the deposit of offal was discovered in a

very foul condition. In Wales the death-rate was 22. At Holywell the deaths exceeded the births, owing chiefly to measles following an epidemic of scarlet fever.

*Third Quarter.—July, August, September.*

*In the United Kingdom* the births of 252,061 children, and the deaths of 149,673 persons of both sexes, were registered in the three months ending on September 30th. The recorded natural increase was 102,388.

The number of persons married in the quarter ending September 30th, 1869, was 108,380.

The death-rate of the Kingdom differs little from that prevailing in England and Wales.

The resident population of the Kingdom in the middle of 1869 is estimated at 30,621,431; that of England and Wales amounting to 21,869,607, of Scotland to 3,205,481, and of Ireland to 5,546,343. The corrected death-rate of the quarter is 20·8 per 1000; the birth-rate 34·5; the marriage-rate 14·8.

The several facts concerning Scotland and Ireland are recorded in the quarterly reports of the Registrars General of those parts of the Kingdom.

*England.*—In the third quarter of the year the marriages were below and the births and deaths slightly above the average of the season.

*Marriages.*—87,956 persons were married in the quarter that ended on September 30th, 1869. The marriages were 43,978, against 43,509 in the preceding summer, and allowing for increase of population, the rate was slightly above that of the corresponding season of 1868. The marriage-rate was 15·9 per 1000, while the average of ten preceding quarters was 16·4; the circumstances, however, which operated to depress marriages in England did not prevent an increase in certain parts. In the South-western, West Midland, North-western, and Northern Divisions, and in Yorkshire, there was an increase. In Staffordshire, Warwickshire, and Durham there was a notable increase; in the district of Dudley the increase in the number of marriages was 28 per cent.

*Births.*—The births fluctuate less than the marriages, and in each of the three quarters ending 30th September 1867, 1868, and 1869, the numbers were 190,782, 192,583, and 190,394 respectively, or nearly the same. The Eastern division, and Monmouthshire and Wales, show the greatest proportional decrease. A considerable decline was also observed in the counties of Middlesex (*extra-metropolitan*), Northampton, Devon, Salop, Stafford, Lincoln, Northumberland, and Cumberland. The annual birth-rate of England in the three months under review was 34·5 per 1000 of population against an average of 34·0. A comparison of the birth-rates to every 1000 of population in certain large towns in each of the two quarters ending 30th September 1868 and 1869 respectively shows the following results:—Salford 38·6 and 40·0, Newcastle-upon-Tyne 37·0 and 38·2, Glasgow 39·7 and 37·8, Sheffield 38·4 and 37·7, Edinburgh 35·9 and 36·4, Liverpool 37·3 and 35·4, Bristol 33·5 and 35·1, London 34·6 and 34·7, Manchester 37·2 and 34·4, Birmingham 35·9 and 34·4, Dublin 28·3 and 25·3.

*Increase of Population.*—The natural increase of population in England and Wales in the 92 days, or the excess of births over deaths, was 75,750, or more by 13,649 than the excess in the corresponding quarter of the previous year. This addition, however, to the population of the country was greatly reduced by emigration.

The number of emigrants from ports in the United Kingdom was 70,734, of whom 30,114 were of English, 7873 of Scotch, and 18,855 of Irish origin, while 13,892 were foreigners. The most noticeable feature in the return is the increased activity with which emigration proceeded

during the quarter. Those who sailed from ports where Government emigration agents are not stationed, are not included in the returns. The greatest proportional increase as regards nationality appears to have taken place amongst the English and Scotch emigrating to the United States and to British North America. The number of Irish who emigrated during the quarter is only 3171 in excess of that in the corresponding season of 1868. In the total number of emigrants the increase was 18,109. Of the English emigrants 54,925 sailed to the United States of America, 10,131 to British North America, 4662 to the Australian colonies, and 1016 to other places.

*Prices, Pauperism, and the Weather.*—The price of wheat rose from 45s. 7d. per quarter in the three months ending 30th June 1869 to 50s. 11d. per quarter in the succeeding three months. In the same period of 1868 it had been 59s. 1d., and in that of 1867, 65s. 4d. In the last eight quarters the decrease amounted to 22 per cent. Potatoes were also lower in price than in the summer of 1867 by 14 per cent. The mean price per ton for the best quality at the waterside market in Southwark in each of the three summer quarters of 1867–69 was 127s. 6d., 147s. 6d, and 110s. respectively. Beef as sold by the carcase at Smithfield Market ranged from 4 $\frac{3}{4}$ d. to 7 $\frac{1}{2}$ d. per lb. according to quality. Mutton ranged from 5 $\frac{1}{4}$ d. to 7 $\frac{1}{2}$ d. per lb. Both beef and mutton were about  $\frac{1}{2}$ d. per lb. dearer than in the summer quarter of 1868. The rise is perhaps due to continued interference with the cattle trade.

The returns of pauperism were heavy. The average number of persons relieved on the last day of each week in each of the quarters ending 30th September 1867, 1868, and 1869 respectively, was as follows:—

		In-door.	Out-door.
Quarter ending 30th September	1867	- 129,860	- 743,965
"	"	1868	- 138,284
"	"	1869	- 137,599
			- 778,804
			- 780,398

Mr. Glaisher remarks on the meteorology of the quarter that a remarkably cold period set in on the 10th of June and lasted until the 3d of July, after which a warm period, with very little rain, prevailed until the end of the month. On 1st August the weather suddenly changed, and for 21 days there was an average daily deficiency in the temperature of 2°·8. This was followed by a week of very warm weather with brilliant sunshine, and on the 28th August the excess of temperature was as much as 12°. From the 29th August to the 3d September it was cloudy, bleak, and cold; but on the 4th the temperature again rose above the average, and continued generally warm until the end of the quarter, with frequent heavy gales and storms. The mean excess of temperature for the 92 days averaged 1·9° daily.

In July the mean reading of the barometer was remarkably high, being 29·928 in. Only two instances in the preceding 20 years are recorded when such high readings in July were observed, viz., in 1859 and 1863, on which occasions 29·937 in., and 29·961 in. were registered. In August the mean reading was still higher, being 29·968 in.; only one reading approximated to it during the preceding 20 years, viz., in 1864, when it was 29·918 in. In September the reading was very low, viz. 29·642 in., and during the preceding 20 years, the only instances when the mean readings for September were about the same, were in 1841 and 1866, viz., 29·624 in. and 29·575 in. respectively. During the periods of great barometric depression in September, violent gales raged from the south-west, which caused great destruction of life and property.

The mean temperature of the quarter was 61°·4 or 1°·9 above the average of 98 years. In July it was 3°·1 higher than the average; in August 0°·1 higher, while in September it was 2·5° higher. The rainfall for the quarter amounted to 4·9 in. or 2·5 in. below the average of the season; in September it was 0·7 in. in excess of the average.

Harvest work began in the south of England early in August, and became general towards the end of the month; by the end of September it was completed except in the north-west of Ireland, and in the Scottish Highlands.

*Deaths; and the State of the Public Health.*—The number of deaths registered in the third, or summer quarter of the year was 114,644, or 15,838 less than in the same period of 1868, when the prevalence of diarrhoea in London and in other large towns raised the number of deaths considerably above the average. The rate of mortality in the quarter was 20·8 per 1000, and in the same quarter of 1868 it was 23·9, the average of the season being 20·6.

Taking the eleven great divisions of the country as they appear in the tables, it will be seen that in London, 19,306 deaths were registered, compared with 19,248 in 1868, and 16,567 in 1867; the mortality of the quarter was at the rate of 24·3 per 1000. Small-pox caused 62 deaths, measles 337, whooping-cough 869, typhus 534, diarrhoea 2644, summer cholera 192, diphtheria 85, and scarlet fever 1770; this last disease was epidemic and increased rapidly from 75 deaths in the third week of the quarter to 238 in the last week. Few districts were exempt from this disease, but it was most fatal in the East districts, where 642 deaths were ascribed to it; in the West districts it caused 127 deaths, in the North districts 315, in the Central 247, and in the South 439.

In the South Eastern Counties 9538 deaths occurred, being 1280 fewer than in the summer of 1868; the rate of mortality was 18·4 per 1000. Diarrhoea and scarlet fever prevailed in many places; the latter disease causing 32 deaths in Croydon, 22 of the 85 deaths in Alton sub-district, and 29 of the 89 deaths in St. Mary Reading, the mortality in which town greatly exceeded the average, the deaths in summer quarter in the last three years being 121, 163, and 210 respectively.

The South Midland Counties showed a death-rate of 18·9. Typhus and scarlet fever visited several districts, Wycombe suffered severely from the latter disease, and in the West Wycombe sub-district it caused 23 of the 49 deaths.

In the Eastern Counties the mortality was at the annual rate of 18·4 per 1000. The Registrars' notes record several instances of the prevalence of diarrhoea, typhus, small-pox, and scarlet fever. In West Ham there were 527 deaths from all causes, compared with 369 in the same season of 1867, and 473 in 1868; in Yarmouth the deaths were fewer than in 1867 and 1868, the numbers being 232, 306, and 192 respectively.

The South Western Counties had a death-rate not exceeding 17·1, and compare favourably with the other groups of counties. Chippenham suffered from fever, Devizes and Warminster from small-pox, Exeter severely from measles, Tiverton from scarlet fever. Nearly all the large towns in Devonshire experienced a high mortality.

In the West Midland Counties the mortality was at the rate of 18·8 per 1000 annually; all the counties, and particularly Warwickshire, showed a decrease on the same period of 1868; the district of Warwick, however, had an increased mortality, without any cause being assigned by the Registrars. Scarlet fever was very fatal in Shrewsbury, West Bromwich, Dudley, and Coventry, and this disease, as well as typhus, prevailed to some extent in other districts.

In the North Midland Counties, which had a death-rate of 20·0, Lutterworth and Basford were reported by the Registrars to have suffered greatly from malignant scarlet fever, which prevailed also, but with less severity, in many other places. Leicester had a rate of mortality of 28·9 per 1000, and it perhaps suffered more severely from diarrhoea than any other large town in England, and the mortality among young children was excessive; to every 100 births registered there were 26·8 deaths of infants under one year of age.

The rate of mortality in the North Western Counties was 23·2, and the Registrars' notes show how severely many of the large towns suffered from zymotic diseases. In Liverpool and West Derby, typhus, scarlet fever, measles, and diarrhoea were extremely fatal. Wigan, Chorlton, Salford, Manchester, and Preston had a high mortality from diarrhoea, and scarlet fever visited with great severity Bolton, Oldham, Rochdale, Haslingden, Clitheroe, and Blackburn.

In Yorkshire, where the mortality was 23·9 per 1000, scarlet fever prevailed in Wharfedale, some parts of Huddersfield, Halifax, and Bradford, in Dewsbury, Barnsley, Sheffield, Lockington sub-district of Beverley, Sculcoates, Hull, Hornsea sub-district of Skirlaugh and Scarborough. The sub-district of Northallerton was in a very unhealthy state, particularly the village of Osmotherley. In Halifax there was a remarkable infant mortality; to every 100 births registered there were 26·9 deaths of children under one year of age.

The Northern Counties had a death-rate of 21·3. Scarlet fever was most fatal in Stockton, some parts of Durham, Chester-le-Street, Gateshead, Tynemouth, and Whitehaven. In Cockermouth the mortality was 33 per cent. lower than in 1868.

Monmouthshire and Wales experienced the lowest rate of mortality, 16·9 per 1000. Scarlet fever caused 25 of the 62 deaths in the Coleford sub-district of Monmouth; the same disease also prevailed at Merthyr Tydfil, Swansea, Holywell, and Denbigh sub-district of St. Asaph.

The eleven millions of persons living in the chief towns experienced an annual rate of mortality during the quarter of 23·3 per 1000 living, as compared with an average of 22·9; while the inhabitants of small towns and country parishes, numbering somewhat more than nine millions, only suffered to the extent of 17·4, the average rate being 17·8 per 1000.

Of eleven of the largest English cities and boroughs, Liverpool exhibited the highest death-rate, 30·5 per 1000; next followed Manchester 29·3, Leeds 27·2, Salford 25·9, Sheffield 25·7, Hull 25·2, Bradford 24·6, London 24·3, Newcastle-on-Tyne 23·7, Bristol 21·7, and Birmingham 21·4.

Among the forty-six towns next in size, instances of high mortality are shown in Gateshead 30·3 per 1000, Leicester 28·9, East Stonehouse 27·4, South Shields 26·5, Halifax 26·2, Tynemouth 26·2, and Exeter 26·0. The lowest death-rates appear in Merthyr Tydfil 15·8 per 1000, Dudley 16·5, Chester 16·6, Walsall 16·8, and Gosport 16·9.

The large amount of preventible mortality has frequently been alluded to in these reports, but the statement sometimes has all the freshness of novelty; as an illustration of this waste of life it may be repeated with advantage that during the ten years between the last two censuses—1851–60—thirty large towns, having a mean aggregate population of  $2\frac{1}{2}$  millions, lost *every year* 32,735 persons more than would have died had they been subject only to the rate of mortality prevailing in the healthy districts of England.

The most striking feature of this return was the extensive prevalence of scarlet fever. This highly contagious disease finds in the crowded quarters of our large towns all the conditions favourable to its extension; the skill and energy of the medical profession and more particularly of the officers of health are taxed to the utmost in dealing with the disease, in endeavouring where possible to separate the sick and the dying, and in making generally known the precautions most needful; their humane efforts are however beset with difficulties. Until better habitations are within reach of the labouring and poorer classes, until decent public mortuaries are provided in all populous towns, and perhaps also until the rudiments of physiology are included in the education of our youth, so that all who read may know something of the laws by which we live and have our being, we cannot extinguish with needful rapidity the oft recurring visitations of epidemics like that we are now considering; for ignorance is the foster-mother of disease as well as of crime.

*Fourth Quarter.—October, November, December.*

*In the United Kingdom* the births of 252,046 children, and the deaths of 168,169 persons of both sexes, were registered in the three months ending on December 31st. The natural increase of population was thus 83,877.

The number of persons married in the quarter ending December 31st, 1869, was 129,106.

The death rate of the Kingdom differs little from that prevailing in England and Wales.

The resident population in the middle of 1869 is estimated at 30,621,431; that of England and Wales amounting to 21,869,607, of Scotland to 3,205,481, and of Ireland to 5,546,343. The corrected death-rate of the quarter is 23·3 per 1000; the birth-rate 34·5; the marriage-rate 17·6.

The several facts concerning Scotland and Ireland are recorded in the quarterly reports of the Registrars General of those parts of the Kingdom.

*England.*—Marriages, which had been declining every Christmas quarter since the year 1865, evinced a disposition to revive in the last quarter of 1869. The births were slightly and the deaths considerably in excess of the average.

*Marriages.*—104,076 persons married in the Christmas quarter of the past year. The number exceeds by 1290 the number in the previous Christmas quarter. The marriage-rate of the season remained, as in the two previous autumn seasons, below the average; it was 18·8 to 1000 living. Marriage was below the rate of the previous Christmas quarter in London, Lancashire, and Yorkshire; the rise was chiefly in the Midland and the Western Counties.

*Births.*—The number of births registered in England in the three months ending 31st December 1869 was 190,594, or more than 2000 less than in the autumn of 1868. The birth-rate of the quarter, however, 34·4 per cent., compares favourably with the average of 10 corresponding seasons, which was 33·8.

*Increase of Population.*—The births of the last quarter of the year were in excess of the deaths by 62,453, and if emigration and immigration had been equal, this number would represent an average daily increase of population during the three months of 679.

The total number of emigrants who left ports of the United Kingdom where there are Emigration officers, in the quarter ending 31st December 1869, was 38,481, of whom 16,762 were of English, 4123 of Scotch, and 10,305 of Irish origin, while 7291 were foreigners. 31,695 were bound for the United States, 1989 for the North American Colonies, 3826 for the Australian Colonies, and 971 for other places. The emigration was greater than it had been in any autumn quarter since 1865. On an average, emigration carried off 182 emigrants of English origin daily. After deducting this number from the natural increase of population, the daily increase becomes 497.

*Prices, Pauperism, and the Weather.*—The average price of wheat fell from 67s. 11d. in the autumn of 1867 and 51s. 11d. in the autumn of 1868 to 46s. 0d. per quarter in the last 13 weeks of 1869, so that the reduction in the last eight quarters amounted to 32 per cent. The best beef was a halfpenny a lb. dearer than it was at the end of 1868, while the price of inferior beef was a farthing per lb. dearer. Inferior mutton was a halfpenny a lb. dearer than it was at the close of 1868; superior mutton was three farthings a lb. dearer. Potatoes were cheaper than they were in the autumn of 1868. The wholesale price at Waterside Market, Southwark was 3s. 9d. to 5s. a hundred weight, according to quality.

The returns of pauperism still continued heavy. The average number of persons relieved on the last day of each week in each of the quarters ending 31st December 1867, 1868, and 1869 respectively, was as follows :—

		In-door.	Out-door.
Quarter ending 31st December	1867	- 145,886	- 771,754
„	„ 1868	- 152,733	- 797,546
„	„ 1869	- 151,996	- 813,315

The weather was characterized by alternations of high and low temperatures, circumstances which could hardly fail to injuriously affect the public health. The mean temperature of the whole quarter was 43·3, which is about half a degree below the average of 98 years. The amount of rain measured was 7 inches, a quantity which very closely represents the average fall. There were several very heavy gales of wind during the quarter, and pressures of wind were recorded of 30 lbs. on the square foot.

*Deaths; and the State of the Public Health.*—In the last 92 days of the year 1869 as many as 128,141 deaths were registered. This number is 7687 more than in same period of 1868, and 11,944 more than in the last quarter of 1867.

The mortality was at the annual rate of 23·2 per 1000 living, whereas the rate in the same season during the ten previous years was 21·9 per 1000; the names of nearly 7000 persons have thus been added to the death registers of England during the last 3 months of the year who would not have found a place there had the ordinary rate of mortality prevailed.

It is noticeable that while the excess in the death-rate of the previous 3 months, ending 30th September, was caused by the high mortality in large towns, in the last quarter of the year the excess was shared by the small towns and country parishes.

The chief towns, inhabited by more than eleven millions of persons, experienced a death-rate during the quarter of 25·8 per 1000 annually, the average of the season being 24·3 per 1000; the inhabitants of the small towns and rural parishes died during the same period at the annual rate of 19·7, the average being 18·9.

The 14 greatest cities and towns among them, peopled by more than six and a half millions inhabitants, suffered a mortality at the annual rate of 27·6 per 1000 living.

Of the English towns in this group, Sheffield showed the highest rate, 30·8 per 1000; Manchester followed with a rate of 30·6; Salford 29·1; Liverpool 28·9; Leeds 27·9. Birmingham had the lowest mortality, 25·7; Hull 26·0; Bradford 26·0; while it is gratifying to notice that the rate of 26·4 per 1000 in Newcastle-on-Tyne indicated a considerable improvement in the health of that town.

In the 46 towns next in importance, having an aggregate population of 2,819,555, the death-rate during the quarter was at the rate of 24·4 per 1000 annually. Among these the following showed the highest rates of mortality; Blackburn 38·0 per 1000; Swansea 31·6; Gateshead 30·9; Exeter 30·0; Derby 29·9; Nottingham 29·8; and Bolton 29·5. Comparing favourably with these are Gosport 16·8 per 1000; Yarmouth 19·1; Norwich 19·2; Merthyr Tydfil 19·2; Plymouth 19·8; Devonport 20·5; and Ashton-under-Lyne 20·6.

Of the eleven great divisions of the country, in the first, London, 21,186 deaths were registered in the last three months of the year, compared with 19,416 in 1868, and the mortality was at the annual rate of 26·7 per 1000. Small-pox caused 87 deaths, measles 473, diphtheria 113, whooping-cough 823, typhus 552, diarrhœa 368, and scarlet fever 2710; this epidemic prevailed with remarkable intensity, increasing from 75 deaths in the third week of July to 245 early in December; from

this maximum number it subsided gradually, and the deaths amounted to 159 in the last week of the year. It was most fatal in the East Districts, where the mortality from the disease was at the annual rate of 51 per 10,000 living; in the North Districts it was 30·1, in the South Districts 39·1, in the Central Districts 29·4, and in the West Districts 14·7 per 10,000 living.

The South Eastern Counties had a death-roll of 10,466, being at the annual rate of 20·2 per 1000. Scarlet fever caused 15 of the 57 deaths in the Carshalton sub-district of Epsom, 35 of the 319 deaths in the sub-district of Croydon, 10 of the 40 deaths in Mortlake, 6 of the 21 deaths in Hoo, 21 out of 77 in Eastbourne, 17 of 63 in the Broadwater sub-district of Worthing, 12 of 31 in the Farnborough sub-district, 10 of 27 in Bramley, Basingstoke, 19 of 84 in Abingdon, and 82 of the 235 deaths in Reading. Measles prevailed in Dartford, Rochester, Ryde, and Hastings, which experienced a high rate of mortality. There were 12 deaths from fever and 4 from scarlet fever in Tonbridge. Scarlet fever and whooping-cough caused many deaths in Brighton; and Portsea Island suffered from measles and scarlet fever.

In the South Midland Counties the mortality was at the rate of 20·8 per 1000. Scarlet fever prevailed in every county and was most noticeable in Willesden, Edmonton, Aylesbury, and Wycombe. Measles was most fatal in Royston, Watford, and the Duxford sub-district of Linton.

Fever caused 10 deaths in Huntingdon, and diarrhoea 7 in Biggleswade.

The Eastern Counties experienced a mortality of 19·8 per 1000, which compares favourably with the other divisions of the country. West Ham was severely visited by scarlet fever, measles, whooping-cough, and typhus. In the parish of Sheering, Epping, 20 persons contracted typhoid fever, of whom 4 died. The Registrar of the Newport sub-district of Saffron Walden reported:—

“Fever of a typhoid nature has prevailed in the parish of Wicken; about 50 cases have occurred up to the present time, and 9 deaths. The impurity of the water is alleged as the principal cause.”

Colchester and Witham suffered from scarlet fever; diphtheria was fatal to 3 persons in one family in Melford, Sudbury, and 5 deaths were referred to that disease in the Attleborough sub-district of Wayland. In Docking there were 107 deaths compared with 60 in the same period of 1868.

In the South-western Counties the death-rate was 20·2. Seventy persons have suffered from small-pox in Warminster since its first outbreak in the spring of the year. Measles and scarlet fever prevailed in many districts. Exeter experienced a high death-rate, the number of deaths being 261, compared with 176 in the corresponding period of 1868. In the North Hill sub-district of Launceston 31 of the 60 deaths were from measles, which was very fatal in the parish of Stoke Climsland.

In the West Midland Counties the mortality was at the annual rate of 22·1 per 1000. Bristol, Clifton, Cheltenham, Stafford, West Bromwich, Stourbridge, Droitwich, Kings Norton, Foleshill, and Warwick, are districts in which the deaths largely exceeded the average. Scarlatina and measles prevailed in most of the districts. West Bromwich suffered severely from measles, scarlet fever, diphtheria, typhus, and diarrhoea.

The North Midland Counties experienced a death-rate of 22·1 per 1000. In Leicester the deaths amounted to 599, compared with 492 in 1868, measles, fever, and diarrhoea were fatal. In Nottingham, where scarlet fever and typhus prevailed, the deaths largely exceeded the average of the season. Derby was visited by measles, scarlet fever, and typhus; and Belper suffered severely from scarlet fever, and to a less extent from typhus.

In Cheshire and Lancashire the death-rate was 25·7 per 1000. The mortality was much above the average in Macclesfield, Bolton, Oldham, Rochdale, Haslingden, and Blackburn; this last town was ravaged by scarlet fever, and 154 out of 792 deaths in the Blackburn sub-district, were from this disease, which was prevalent in many other districts.

In Yorkshire the mortality was 26·5 per 1000; in the West Riding the following districts are conspicuous for having an unusual number of deaths, Wharfedale, Huddersfield, Bradford, Dewsbury, Wakefield, Barnsley, Sheffield, and Ecclesall Bierlow; small-pox, scarlet fever, and typhus were prevalent. The Registrar of Ecclesall Bierlow reported:—

“Measles caused 15 deaths, scarlet fever 83, diphtheria 7, fever 27. 40 of the deaths have occurred at Heeley, a suburban village with some 4000 inhabitants, 20 of that number resulting from scarlet fever, which has raged with unusual virulence. The village is badly drained.”

In the East Riding, York, Sculcoates, and Hull were visited severely by scarlet fever, which was also fatal in Scarborough, Thirsk, Whitby, and Stokesley in the North Riding.

The Northern Counties had a death-rate of 22·8 per 1000. Darlington, Stockton, Tanfield sub-district of Durham, Chester-le-Street,

Newcastle-on-Tyne, and Tynemouth suffered much from scarlet fever; measles and typhus prevailed in South Shields; typhus and typhoid fever caused 31 deaths in Whitehaven. Several districts in these counties had fewer deaths than usual, in Cockermouth the number was 222 against 328 in the same period of 1867, and 300 in 1868.

Monmouthshire and Wales show the lowest rate of mortality of the eleven divisions, it was 19·60 per 1000 annually in the last quarter of the year. The districts of Bedwelty, Swansea, and Gower have a conspicuous increase of mortality; there were 28 deaths from scarlet fever and 13 from fever in Aberystroth sub-district of Bedwelty; 10 of the 75 deaths in Bridgend were from measles; 12 of 62 deaths were from scarlet fever in Ystradgunlais; scarlet fever was distressingly fatal in Swansea, causing 123 of the 366 deaths in the sub-district; 13 of the 74 deaths in Haverfordwest are referred to measles, which also prevailed in Bridgend, and in the Denbigh sub-district of St. Asaph.

It will be seen from this return that scarlet fever, the prevalence of which was remarked on in the previous quarterly statement, increased in intensity and spread over a larger area. Professor Tyndall has shown that the countless myriads of motes that are seen dancing in every sun-beam are organic particles, and among them are zymotic bodies which are germs of disease. These bodies are in concentrated force in the rooms occupied by persons suffering from or who have died of scarlet fever, hence the absolute necessity of isolating the sick as much as possible and of adopting the precautions for the hygienic management of the invalid chamber which have been drawn up by the medical officers of health, by the medical officer of the Privy Council, by Dr. Budd of Bristol, and other authorities.

By the intelligent observance of these precautions something may be effected in arresting the progress of this fatal epidemic.

\* The mortality for the year 1869 is the mean of the quarterly rates.

Health of London in 1869.\*

At this distance of time from the date of the last Census the populations of the great English cities can only be conjectured. They necessarily vary from year to year ; as their increase depends upon the births and deaths, and upon the strength of the two opposite currents of migration inwards and outwards. Yet the growth of London, as well as of many of its sister cities, has latterly from decade to decade been constant, and has fluctuated within narrow limits of variation ; so the estimated number of 3,170,754 souls for the year 1869 probably differs little from the true figure of the population living on the hills, acclivities, and banks on both sides of the Thames. This population is within the domain of the Metropolitan Board of Works.

Outside this area of 122 square miles is a broad circle every year spreading, and occupied, in the year 1869, within the Metropolitan Police District by full 524,535 souls. The drainage of these outlying parts is excluded from the Metropolitan scheme. The water companies and the gas companies often supply both regions.

The registered births in London were 111,930, and as usual largely exceeded the deaths. The excess of births over deaths in the 52 weeks was 33,997. If the calculated growth is correct, the immigrants must have exceeded the emigrants by some 10,000.

The mortality of the year fluctuates with the seasons, and with the zymotic activity of disease. In the year before us the mortality was exceptionally high : 77,933 deaths were registered, and the mortality was at the annual rate of 24·66 (nearly 25) in 1000 ; the males dying at the annual rate of 27, the females at the annual rate of 23 in 1000.

\* Reprinted from the "Annual Summary" for 1869.

† For the years 1849–59 the results are only approximative, having been reduced to Robinson's Anemometer from observations made with Whewell's.

‡ By Robinson's Anemometer.

12,298 of the deaths took place in 120 public institutions; no less than 7068 in 47 workhouses, 4329 in 26 general and special hospitals, 336 in 19 lunatic asylums, and 83 in 12 prisons.

The greatest number of deaths in single institutions were: 499 in Marylebone workhouse, 502 in Pancras workhouse, 574 in St. Bartholomew's Hospital, 479 in the London Hospital, 495 in Guy's Hospital, and 518 in the London Fever Hospital.

It is evident that if no such provision existed as the Poor Law affords, and the charity of hospitals supplies, great numbers of the people of London would have in old age and in sickness a dread prospect before them. And it is gratifying to note, that with the progress of civilization, that pious reverence which led the Greeks and the Romans to provide, at great sacrifices, the rites of sepulture to the dead, is now extended to provide some mitigation of their sorrows to the sick.

But can no further progress be made? Has everything been done when the old work-worn artizan, or the ratepayer of past years, is mixed in the common wards of the workhouse, with the worst types of humanity? Then what numbers enter the workhouses alive, and are carried out dead! Some explanation is required of the 499 deaths in Marylebone, of the 502 deaths in Pancras workhouse. Yet no reports, by the medical officers, appear to be published.

The hospitals now supply reports by very competent registrars. The question remains; how can the advantages of hospital organization be enjoyed without visiting on the inmates the evil influences of the atmosphere of disease in which they are steeped? The spread of fever is limited by despatching patients to fever hospitals. But 518 deaths in a year in one institution is a startling number.

Howard's devotion to the criminal population rescued them from the hands of fever, and our prisons are now models, which only excite regret that their favourable sanitary conditions cannot be placed within reach of honest labourers.

Scarlet fever, whooping-cough, and diarrhœa have been the reigning epidemics of the year; to them 12,958 deaths were referred. Of the three forms of continued fever, enteric fever was the most prevalent.

More than half of the deaths in London (41,584) occurred under 20 years of age; in the next three vicenniads the deaths ranged from 10,044 to 11,814 and 11,961; only 2530 of the dead had attained the extreme bourne of life, 80 years and upwards. The annual rate of mortality per 1000 in five vicenniads was 30 in childhood and youth, 10 in prime manhood, 21 in full age, 65 in mature age, and 212 in old age.

The average mortality for 30 years of the five regions of London ranges from 23 in the North and 23 in the West, to 25 in the South, 25 in the Central, to 26 in the East Districts. In the year 1869 the mortality exceeded these averages everywhere except in the West Districts and in South London where the effects of drainage are manifest. The mortality was at the rate of 28 per 1000 in the East Districts.

The element influencing mortality, which has undergone the greatest changes in recent times, is the system of drainage. The salutary effect of this great engineering work is, as has been already shown, patent; but its full influence can only be experienced when the works are completed and supplemented. On the north side progress has been made with the low-level sewer since last year; but it is not yet finished. A mishap at the Abbey Mills pumping station has also led to some confusion. The smaller drains are in the hands of the district Boards, and the house proprietors: here some progress too has been made. The discharge of the sewage into the Thames at Crossness and Barking is a removal of the dirt of London from the dwellings of its inhabitants to the river, where it is diluted, tossed backwards and forwards below Barking and Crossness; when at the end of a fortnight its residue is found a few miles down the river nearer the sea. The pollution of the river by sewage above London is for the future to be prohibited; but there is no clear evidence of any measure to put the sewage on the land for purification below London. The irrepressible malaria can only be subdued by cultivation and vegetation: how this is to be done is the great engineering and agricultural problem of the day. It is now engaging the attention of a competent Committee of the British Association.

The area in the Police district around London, comprising 361,773 acres, about 94,087 inhabited houses, and a population of 524,535, has now no right of drainage; so that a most deplorable state of things is springing up, which must end fatally unless it is met at an early period.

Here it is in vain that the Royal Commissioners to inquire into the best mode of distributing the sewage of towns, have confidence in submitting their conclusion that: "The right way to dispose of town sewage is to apply it continuously to land, and it is only by such application that the pollution of rivers can be avoided."\* How is the land for irri-

† This Table is compiled from the Weekly Returns made by the Registrars of London, and relates to the 52 or 53 weeks of each year. The figures for 1869 will not agree with those found on page 196, which relate to the correct year instead of 52 weeks; moreover that the same Institutions are not in all cases included in each list.

\* Cited by Mr. Rawlinson in Appendix (p. xi.) to his important Barking Report.

gation to be procured? At what cost? And what will be the consequence of a series of exhaling damp beds on which the sewage of half-a-million, a million, or more people is distributed in all the seasons of the year? What people will accept the proximity of such rich moist meadows? To remote fields the sewage of large isolated towns like Croydon may be carried. But by some other methods this engineering problem of the London suburbs must be solved, and assuredly it is soluble. The mechanism to bring products to the London market, and to distribute them is provided; and so may be the mechanism to return their residue to the earth from which they came.

Every successive year shows the increasing importance of a vigilant supervision of the qualities of the water supply, by a chemist in whose integrity and skill implicit confidence can be placed.

TABLE 49.—Population; Births and Deaths; Annual Birth and Death Rates; Mean Temperature and Rainfall, in the Year 1869, in LONDON and THIRTEEN other LARGE TOWNS of the UNITED KINGDOM.

CITIES, &c.	ESTIMATED POPULATION in the Middle of the Year 1869.	BIRTHS in 52 Weeks ending 1st January 1870.	DEATHS in 52 Weeks ending 1st January 1870.	ANNUAL RATE to 1000 living during the 52 Weeks ending 1st January 1870.		MEAN TEMPERA- TURE in 52 Weeks ending 1st January 1870.	RAINFALL in inches in 52 Weeks ending 1st January 1870.

Average Number living to One Death annually (1840-69) . . . }	41	44	44	40	38	40

NOTE.—The Annual Rate of Mortality in this Table is deduced from the Population at the Censuses of 1841, 1851, and 1861, and from the Deaths registered in London in each of the several years.

The Mortality for LONDON in each year, 1840-69 is calculated on the Deaths for the complete years, instead of for 52 or 53 weeks.

TABLE 56.

POPULATION OF THE UNITED KINGDOM,  
with Army, Navy, and Merchant Seamen abroad belonging thereto.\*  
(See note at foot of pp. lxviii-ix.)

Middle of Years.	PERSONS.	MALES.	FEMALES.
1801 -	16,302,410	8,096,082	8,206,328
1811 -	18,532,522	9,194,348	9,338,174
1821 -	21,300,573	10,519,256	10,781,317
1831 -	24,423,588	12,004,025	12,419,563
1841 -	27,077,095	13,325,889	13,751,206
1851 -	27,764,034	13,656,998	14,107,036
1861 -	29,358,927	14,397,427	14,961,500
(Estimated.) 1866 -	30,339,861	14,784,947	15,554,914
1867 -	30,551,276	14,864,733	15,686,543
1868 -	30,774,590	14,950,520	15,824,070
1869 -	31,005,108	15,038,049	15,967,059
1870 -	31,232,013	15,121,679	16,110,334

\* In estimating the number of men in the Army, Navy, and Merchant Service abroad, a certain proportion belonging to foreign countries and the colonies has been excluded. In 1811 the troops and seamen were 640,500, but as this number included natives of colonies and foreign parts, only 502,536 were taken.

[The above numbers (1801-61) have been deduced by raising the enumerated population of the United Kingdom, including the islands in the British Seas, (*see* Table 9. p. 84. of Vol. III. Census of England and Wales, 1861,) up to the middle of the respective Census years. In 1866-1870 the numbers have been estimated by adding the population enumerated in the islands in the British Seas in 1861, and the number of men in the Army, Navy, and Merchant Service abroad, (*see* Tables 3. and 16. pp. 81. and 87. Vol. III. Census 1861,) to the population for 1866-70, returned in Table 61. pp. 68-69.]

TABLE 57.—Logarithms of the above Population of the UNITED KINGDOM.

Middle of Years.	PERSONS.	MALES.	FEMALES.

junction with the Registrars General of Scotland and Ireland. The population of the islands in Census taken 3rd April 1871 are available, new estimates for the years 1861-70, based upon the be substituted for those given above.

REMARKS on the METEOROLOGY of 1869; compiled from Tables, &c., furnished by JAMES GLAISHER, Esq., F.R.S., &c., *Secretary of the Meteorological Society.*

In the year 1868 the meteorology was remarkable for long continuance of high temperature, for unusual distribution of rain, and for a generally early season of vegetation. In 1869, however, the several meteorological conditions differed but slightly from the average of 21 years, excepting perhaps that the mean weekly movement of the air was still greater than in 1868, and averaged 2,043 miles, exceeding the average by 299 miles. The annual means of the various elements at the several stations between Guernsey and North Shields are shown below, in Table 59.

These results naturally varied considerably at these several stations, but, so far as concerns the excess or deficiency above or below the average, the observations at the Royal Observatory, Greenwich, may be taken as generally applicable to the whole country.

*Atmospheric Pressure.*—The readings of the barometer showed considerable fluctuations early in January, but with a few exceptions were constantly above the average from 6th to 25th. From this date to 3rd February the readings were low, and at noon on 1st 28·83 was recorded. No remarkable fluctuations then occurred until a steady increase commenced on 21st, which reached its maximum, 30·12, on 23rd March, after which a rapid decrease set in, and the readings were below the average during the rest of the month. The readings during April were generally above the average, but a depression to 29·06 occurred between 15th and 17th. In May a steady fall took place to 29·01 on 6th, after which an increase culminated in a maximum of 30·06 on 13th. Frequent fluctuations occurred from this date to the end of June, and throughout this month, with but few exceptions, the readings were either above or very close to 30 inches. The mean readings throughout July and August were unusually high, 29·93 and 29·97 respectively. In September the mean reading

in the Year 1869. By JAMES GLAISHER, Esq., F.R.S.

was, however, very low, 29·64. The highest reading in these three months was 30·26, on 1st September. During October the readings were generally high, and remarkably steady between 4th and 14th; by the 16th they had fallen, however, to 29·13; from 20th to the end of the month they, with two exceptions, again showed an excess. Early in November the readings were low, while from 10th to 21st they were above the average; a sudden fall then took place from 30·18 on 21st, to 29·03 on 22nd; although the readings subsequently increased they were generally in defect until the end of the month. The fluctuations in December were frequent and considerable; on 6th 30·40 was recorded; on 13th the lowest reading was 29·02; on 16th a rapid fall took place from 29·65 to 28·77; the range of readings in this month was so great as 1·62 inches.

*Temperature.*—With the exception of the seven days from 19th to 25th January the whole of the months of January and February were remarkably warm; during March, however, weather of a decidedly wintry

character prevailed, and continued until 5th April. From 6th to 29th April the weather was warm, but during May, and especially towards the latter end of the month, the mean temperature was considerably below the average. After a short period of warm weather from 2nd to 8th June, a severe period of cold again set in, and with scarcely a day's intermission continued until 3rd July. From 4th July until the end of the month a warm period prevailed. Between 1st and 21st August the mean temperature was below the average, followed by a week's warm weather; from 29th August till 3rd September the weather was cloudy, bleak, and cold, but after the 4th the remainder of the month was generally warm, and so continued until 16th October. After the 16th the weather suddenly changed, and was cold and wintry until the end of October. During the first half of November remarkable alternations of temperature occurred; from 13th to 16th high temperatures with heavy gales of wind prevailed. Cold weather again set in on 17th November and continued to the end of the

year, excepting only a warm period from 10th to 20th of December. The mean temperature of the year at the Royal Observatory, Greenwich, was  $49^{\circ}5$ , and  $0^{\circ}1$  above the average of 21 years; it was however two degrees lower than the mean of 1868. At the several stations at which observations were reported the mean temperature of the year ranged from  $47^{\circ}0$  in Hull, to  $54^{\circ}4$  in Barnstaple. The coldest day of the year was 23d January, when the mean temperature was  $29^{\circ}8$ ; the warmest day was 17th July, when the mean was  $73^{\circ}5$ .

*Rainfall.*—In both January and February the rainfall was somewhat above the average, while there was a slight deficiency in March. In April only one inch of rain was measured, which was but two thirds of the average quantity; in May the 3·4 inches showed a considerable excess, while June again was unusually dry, as were both July and August. In September the rainfall showed an excess, in October a considerable deficiency, while in November the amount measured corresponded with the average; in December again there was a slight excess. The rainfall of the year at the Royal Observatory amounted to 24 inches, which was two tenths of an inch below the average of 21 years, and 1·2 inches below the fall in 1868. At the several stations for observation, furnishing reports, the rainfall of the year varied from 21·4 inches at Cardington and 21·6 inches at Eastbourne, to 47·9, 54·3, and 54·6 inches respectively at Lampeter, Stonyhurst, and Allenheads. Rain fell on but 123 days of the year at Strathfield Turgiss, and on 267 days at Allenheads; at the Royal Observatory, Greenwich, rain was measured on 147 days.

\* The Registration Counties consist of groups of entire Registration Districts; which Districts are, in general, identical with the Poor Law Unions. As the principle adopted has been to place a District or Union which extends into more than one County with the County in which either the principal town or the greater part of the population is located, the limits of the Registration Counties differ more or less from the boundaries of the Counties proper.

† Where the parties to a marriage are of different religious persuasions it sometimes happens that the ceremony is performed according to the rites of both persuasions; in these cases the two ceremonies are entered as two marriages. This column also includes 47 cases of marriage after divorce, viz., 15 divorced

men who married spinsters, 5 divorced men who married widows, 17 bachelors who married divorced women, 8 widowers who married divorced women, and 2 divorced men who married divorced women. For the districts in which these marriages took place, see subsequent pages.

(a) The Districts, which are arranged according to their local position, are collections of contiguous Parishes or Places, generally identical with the Poor Law Unions of the same names.

(b) For the changes made in the constitution of the Superintendent Registrars' Districts during the year 1869, see pages 170-1. The marriages in the districts of Clerkenwell and St. Luke prior to 2d August have been added to Holborn.

\* Includes a bachelor who married a divorced woman.

† Includes two divorced men who married spinsters and also a divorced man who married a widow.

‡ Includes a bachelor who married a divorced woman and also a divorced man who married a spinster.

§ Includes two bachelors who married divorced women and also a divorced man who married a divorced woman.

Abstract of Marriages, 1869.

7

\* For the changes made in the constitution of the Superintendent Registrars' districts during the year 1869, see pages 170-1. The marriages in the district of Kirkdeighton prior to the 30th June have been added to Wetherby; those in Kirkstall prior to the same date, to Leeds.

† The district of Aysgarth was, prior to March 1869, known as "Askrigg."  
‡ Includes a bachelor who married a divorced woman.  
§ Includes a bachelor who married a divorced woman and a widower who married a divorced woman.

\* In the other 55,289 cases the column of the Register headed "Ages" is filled in by the Officiating Minister or by the Registrar of Marriages with the words "of full Age," "Minor," "Under Age," as the case may be; thus losing the additional means of identification afforded by a precise statement of the age of persons at the time of marriage.

AGES of 5,021 BACHELORS and 5,021 WIDOWS who intermarried in 1869.

\* The Registration Counties consist of groups of entire Registration Districts; which Districts are, in general, identical with the Poor Law Unions. As the principle adopted has been to place a District or Union which extends into more than one County with the County in which either the principal town or the greater part of the population is located, the limits of the Registration Counties differ more or less from the boundaries of the Counties proper.

† Some of the births—especially of illegitimate children in London and large towns—escape registration.

\* The Districts are collections of contiguous Parishes or Places combined for purposes connected with the Registration of Births, Deaths, and Marriages; and are generally identical with the Poor Law Unions of the same names. The Districts, GMS in number, are arranged according to their local position under the Registration Counties. The presence of Institutions in any District is indicated in this column of the Table by H for Hospital or Infirmary, L for Lunatic Asylum, and w for Workhouse situated out of the District to which it belongs; and repetitions of these letters show the number of such Institutions in any District. The smaller Institutions are not noticed.

† Wherever the minus sign is prefixed to the number in the column headed "Excess of Births over Deaths," it denotes that the Births in the District, instead of exceeding the Deaths, were, in fact, less than the Deaths to the extent stated.

‡ For the changes made during the year 1869, in the constitution of the Districts of Holborn, Guildford, Farnham, and Farnborough, see page 170.

\* The Sub-districts are sub-divisions of the Districts, and comprise the Parishes or Places in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter W denotes that the Sub-district contains within its limits a Workhouse belonging to the District or Union; v indicates that a Workhouse belonging to another District or Union is included; H indicates Hospital or Infirmary; and L Lunatic Asylum.

† Wherever the minus sign (-) is prefixed to the numbers given in the Column headed "Excess of Births over Deaths," it denotes that the Births in the Sub-district, instead of exceeding the Deaths, were, in fact, less than the Deaths to the extent stated. The Excess of Deaths over Births in several of the Sub-districts of London is attributable to the mortality in Hospitals.

\* For the changes made in the constitution of the Registration Sub-districts, see pages 170-1. In these Tables the numbers of Births and Deaths registered in the Sub-districts of Whitkirk, Rothwell, Wortley, Kirkstall, and Chapelton are tabulated as if the alterations had taken effect on 1st January 1869.

## IX.—YORKSHIRE.—BIRTHS AND DEATHS, 1869—SUB-DISTRICTS—continued.

SUB-DISTRICTS.		AREA in Statute Acres.	POPULATION, 1861.	TOTAL		BIRTHS.				DEATHS.		Excess of Births over Deaths.
				BIRTHS.	DEATHS.	Including Illegitimate Births.		Illegitimate Births.		DEATHS.		
						Males.	Females.	Males.	Females.	Males.	Females.

ENGLAND.—SUPPLEMENTARY TABLE of the

[The principles upon which the Causes of Death are tabled have been explained in previous Annual Reports. It will be sufficient to state now that all the Diseases, either having a distinct character, or fatal to any considerable number of persons, are classified under 116 heads; some of which, however, include groups of very distinct diseases,—such as are fatal to only a few persons, or diseases which are often confounded with other diseases. The rule has been to refer the distinct diseases to heads under which the cases were so numerous, that the additional numbers would not interfere with the calculated proportions. Where it is desired,

Class and Order in the Table of Diseases under which the Cases are entered.	CAUSES OF DEATH.	ALL AGES.	AGES OF MALES.

CAUSES of DEATH at different Periods of Life, in the Year 1869.

partial correction, however, can now be made by means of the following Supplementary Tables, containing many of the deaths from distinct diseases, such as chicken-pox, mumps, epistaxis, dry gangrene, polypus, rickets, bronchocele, &c. &c., and deaths from other forms of disease, such as softening of the brain (necrencephalus), which are returned in many cases under other heads, as paralysis, &c.

These Tables are an extension of the Tables of Causes of Death in England, pp. 118-123.]

\* NOTE.—In calculating the average annual rate of mortality from all causes in London, a correction has been made by distributing the deaths in hospitals proportionally over every district. The second rate of mortality (in figures of different character) is the result of a further correction, in Chelsea and Greenwich for the Military and Naval Hospitals, in Wandsworth for the County Lunatic Asylum, and in the other London Districts for Workhouses situated out of the Districts to which they belong.  
In all the other Districts of England the second rate of mortality is the result of a correction for either a Naval or Military Hospital or Camp, a County Lunatic Asylum or a Workhouse situated out of the District to which it belongs. The particulars of these corrections are given in the Supplement to the 25th Report, pp. xl lviii.  
† For the changes made in the constitution of the Superintendent Registrars' Districts, see pages 170-1.

Population 1861, Average Annual Rate of Mortality from All Causes in the Ten Years 1851-60, and Deaths from several Causes in the Year 1869, in the DISTRICTS of England—continued.

\* The following poisons were each fatal in one instance:—chrysanthemums, at age 2; muriatic acid and white bryony berries, at age 3; nightshade, at age 10; sulphate of copper, at age 15; essential oil of almonds and chlorodyne, at age 25; potash, bella donna, and ammonia, at age 45; bichromate of potash, at age 55; and Burnett's disinfecting fluid, at age 65.

† Three deaths from suffocation by the following means were recorded:—Swallowing a nail, at age 3; swallowing a bead, at age 5; and the fumes of charcoal, at age 15.

‡ One death resulted from each of the following causes:—Swallowing a bone, at age 2, a dress-hook, at the same age, and a button, at age 3; eating unripe gooseberries, at age 4; swallowing an orange pip, at age 5, and a cherry-stone at the same age; excessive smoking, at age 35, and bite of a dog, at age 65.

DEATHS IN LARGE PUBLIC INSTITUTIONS,  
1869.

---

THE FOLLOWING PAGES contain the numbers of deaths registered during 1869 in each of the largest public institutions of England. These figures will afford the means of correcting the mortality of sub-districts and districts where affected by the situation therein of these large institutions, through the deaths recorded in them. The following list will not be found to contain all the public institutions in England and Wales, but only those which might reasonably be supposed to disturb (by the number of deaths recorded in them), the mortality of the sub-districts in which they are situated. All workhouses and large hospitals, infirmaries, or lunatic asylums are included, while prisons, almshouses, schools, as well as small private lunatic asylums, cottage hospitals, and benevolent asylums, are generally excluded, unless from exceptional circumstances they have been deemed of sufficient importance to demand special notice. The list, as settled, includes 1,002 institutions; of which 689 are workhouses, workhouse infirmaries, or workhouse schools; 241 hospitals or infirmaries; and 72 lunatic asylums, mostly public county asylums, but also including some large private asylums, many of which receive pauper patients.

---

LETTER to the REGISTRAR GENERAL on the CAUSES of DEATH in  
ENGLAND, by WILLIAM FARR, Esq., M.D., F.R.S.

---

YEAR 1869.

---

SIR,

IT is shown in your Report that the population of England increased somewhat more rapidly between 1861 and 1871 than it had increased in the previous decenniad; and that the rate of mortality has consequently been slightly overstated.

This correction being made, the year is found to be healthier than usual; and the mortality, in fact, from the class of zymotic diseases was below the average of the fifteen preceding years, although the formidable scarlet fever was both prevalent and fatal. The diseases of the respiratory organs owing to the cold weather in winter were unusually fatal.

I.—ZYMOTIC DISEASES.

Small-pox was not generally active; in London it was incubating, in Lancashire it was more active, and in Yorkshire the registers contain 610 deaths by the epidemic, of which 100 were recorded in the Sheffield, and 218 in the Dewsbury districts. In Hull and Sculcoates 71 deaths by small-pox were registered. Ipswich, in the Eastern Division, saw 32 die of small-pox. The prevalence of these outbreaks was chiefly on the East side of the Island. Measles, croup, and whooping-cough levied their customary toll, chiefly on children. Measles was most fatal in the North-Western, South-Western, and West-Midland Divisions, and London. Scarlet fever was terribly fatal: 27,641, chiefly children and young people, died of this disease (see Table 3, p. 221), 5841 in London, and 5234 in Lancashire and Cheshire.

Continued fevers have been for the first time distinguished in conformity with the decision of the Nomenclature Committee; and enteric fever (*typhia*) is found to be the prevailing form of the year, as to it 8659 deaths were referred against 4279 deaths by typhus; 5449 deaths were registered under the rather vague name of simple continued fever.

Diarrhœa, cholera, and dysentery, were as is usual, prevalent, but to a less degree than usual: yet to diarrhœa 19,903 deaths were referred, it being still one of the most fatal of zymotic diseases.

Though ague and rheumatism are less fatal, they cause much protracted sickness, to be diminished by drainage.

Under syphilis 1859 deaths were returned; the number of such deaths is rapidly increasing. The mortality thus designated has in 17 years risen in the ratio of 35 to 85. Some more effective steps are required to stop the ravages of this insidious disease which lies concealed by its remoteness but is the primary cause of many deaths returned under its ultimate transformations. The bones, the brain, the bowels are all infested by it. Innocent children are the chief but not the sole sufferers. Stricture of the urethra is inserted in this class because it is commonly the consequence of contagious disease.

Hydrophobia had been reduced to a low ebb until in the years 1865-6 it made a sudden start, and this canine infection was the death of 19 and 36 persons; the deaths in the two following years were 10 and 7; in 1869 they rose to 18.

Glanders is fatal to rather more than 4 persons annually; and 6 and 3 were the deaths ascribed to this equine infection in the two last years.

Under the system of Poor Laws only 52 deaths by privation chiefly adults were recorded in 1869: the deaths under this head have happily declined during the last three years from 109 to 96 and to 52. The annual mor-

The natural food for children is the breast-milk of the mother ; and its want is justly considered a cause of death ; to it and inanition of infancy 1408 deaths are referred.

Scurvy is warded off by the abundance of potatoes and other vegetables, but it has latterly increased in prevalence.

To delirium tremens, usually a form of alcoholic poisoning, 433 deaths were referred, to intemperance in drinking 331 ; making in the aggregate 764 deaths by one form or other of alcoholism : within the last three years the annual deaths by the poison of drink have happily declined to a considerable extent. We may hope ere long to see these cases further decline until drunkenness and excess in drink are no longer indulged in by any but the unfortunate monomaniacs who, for their own protection, and for the sake of society, require restraint.

Parasites, including hydatids, itch insect, tape worms, and worms of all descriptions still cause a certain number of deaths, which will probably diminish as the water-supply becomes purer, and the meat-supply is watched. The deaths by these creatures are induced by trains of maladies which are not always discriminated from other affections. The means of personal cleanliness, soap and abundance of pure water, should be placed within the reach of the whole population ; at many factories workmen may be well supplied with water ; and some means of personal coercion, if necessary, might well be employed, to prevent unclean vagrants carrying and spreading infection among their race. They do incalculably more mischief than scabby sheep.

## II.—DIATHETIC DISEASES.

This class is divided into two orders ; at the head of the first is gout, at the head of the second scrofula. They are connected to some extent with the dietetic order of the first class : for gout is usually caused by luxurious living, and scrofula by defective dietary. But in other diseases of this class such as cancer and phthisis, the seeds of disease appear to be often inborn ; and it is certainly impossible to trace, at present, their origin to external agencies. All these inquiries, however, are still in their infancy. Gout is, like syphilis, becoming more fatal ; the deaths registered to its account are rapidly increasing and loudly proclaim the necessity of beginning at least some reform in the dinners and habits of the wealthier classes, if they would avoid not only the pangs of this painful disease, but its disorganizing ravages of their vital organs. Refined gluttony is as fatal as intoxicating drink. When will the culinary art be kept within its due limits, by simple elegant means please the taste, satisfy appetite, and sustain health ? Who will take the lead in this cultivated temperance, and make an effort to put a stop to the annual sacrifice of so many precious lives ? Women have hitherto, and we may hope, will still continue, to set men good examples ; for the deaths of 352 men, and of but 96 women were referred to gout.

There is an increase of deaths ascribed to cancer, a decrease in the deaths by dropsy and by mortification.

Tubercular diseases are still heavy, but phthisis, hydrocephalus, and scrofula were less fatal than in former years.

## III. LOCAL DISEASES

*Diseases of nervous system.*—The nervous system, especially in its brain development, plays so important a part in man, that its diseases in their intense forms put an end to life. The deaths under this head are 61,550 ; which, after deducting 26,015 by convulsions, including probably many vague undeveloped maladies, leave 35,535 referable severally to cephalitis, apoplexy, paralysis, insanity, chorea, epilepsy, and some other affections

of the brain, spinal marrow, nerves, and senses. The progress of Pathology reveals an organic change of the structure of the brain, which has only in these later years found a place in the tables: the deaths in the year by *necrencephalus*, or by softening, which is a sort of mortification of the brain, were 2135; of men 1317, of women 818. These organic changes of the organ of the mind are attended by functional derangements of various kinds, such as imbecility and paralysis of the nerves suppressing the muscular energy.

*Diseases of the organs of circulation.*—The blood plays so important a part in the individual life, that interference with the general current of its circulation from any cause is often fatal; under this head 24,899 deaths were classed. By pericarditis 676 deaths are said to have been caused; by aneurism 595. The great peculiarity in respect of aneurism is that 457 men and only 138 women died of it.

The influence of sex is felt at every age; but no children under 10 and no man or woman above the age of 85 died of aneurism in the year.

	10—	15—	25—	35—	45—	55—	65—	75—
Deaths by Aneurism—								
Of men - -	1	9	83	144	104	72	36	8
Of women - -	—	5	19	34	30	23	19	8
Excess of men -	1	4	64	110	74	49	17	—

This disparity may throw some light on the causes of aneurism, which has been associated by some observers with gout and syphilis.\* The deaths referred to aneurism increased, and no effect of the improved methods of treatment by compression are apparent in the returns. Angina pectoris, syncope, and hypertrophy caused a considerable number of deaths in both sexes. To the newly discovered cause of death, *embolism*, the deaths of 27 males and 66 females were referred; only 2 males and one female were under 5 years of age; 46 of the women, 13 of the men, were of the ages 20–55; so that the excess in women is probably connected with the period of child-bearing. Previous to 1866 this cause of death was not returned separately; in 1866 the number was 18, which increased to 32, 28, and 93 respectively in the three following years 1867–9.

*Diseases of respiratory organs.* — The delicacy, the extent, and the exposure of these organs to atmospheric vicissitudes, as well as the vital importance of respiration, prepares us to expect to find them the seat of many fatal diseases; and in fact the deaths under this head amount to 80,397, including 43,180 males and 37,217 females of all ages. Young children under the age of 5 years are the greatest sufferers from pneumonia, and people of 65 and upwards from bronchitis, which is the greatest enemy they have to encounter. They die of the disease especially when the temperature falls below the freezing point of water. Phthisis predominates in the earlier periods of manhood. The mortality from bronchitis has gradually risen since the year 1852, from 1.0 in 1000 living to 1.7, and in the year 1869 it became 2.0. Pneumonia and phthisis grew a little less fatal; but not to an extent to compensate for the increase of bronchitis. It is probable that the dust and smoke in the air of cities and workshops irritates irreparably the living member of the air tubes, and thus lays the foundation of bronchitis in the chronic form. Could not manufactories and kitchens largely consume their

\* See Science and Practice of Medicine, by W. Aitken, M.D., 3rd ed., vol. II., pp. 721–2.

own smoke, and thus diminish the smoke nuisance, which begrimes the faces of the people, their clothes, and their furniture?

*Diseases of digestive organs.*—The death-toll paid in these diseases is very constant. The deaths by rare diseases, such as hernia, ileus, and intussusception, showing little variation. Liver disease increased.

*Diseases of urinary organs.*—Not only nephria (Bright's disease) but nephritis became a more frequent entry on the death register; so the annual death-rate rose in 17 years from 191 to 337 deaths in a million living.

Diabetes is rare in childhood, but it is a mistake to suppose that it never occurs; and it is twice as fatal in men as it is in women. The deaths in the year 1869 show this.

*Diseases of reproductive system.*—Sixty-five deaths only occurred in men, 1218 in women; ovarian dropsy killed 234, notwithstanding the bold new operation, which has been practised successfully in so many cases. At the hospitals it may everywhere now be brought home to the poor women who suffer. The disease is probably one that is too long concealed by the patient, while the operation is too long deferred by the surgeon; within the last five years an encouraging diminution in its fatality has been observed.

*The organs of locomotion* are not often affected by spontaneous fatal diseases; they suffer more from injuries.

*The integumentary system* is the seat of many troublesome but of few fatal affections. Of the deaths here registered, it is worthy of note, that 355 were caused by pyæmia. Eczema is now the most fatal of the skin diseases.

#### IV.—DEVELOPMENTAL DISEASES.

The reproduction and growth of the human race are interrupted in various ways, and the interruption proves fatal in a certain number of cases. The first order of fatal causes concerns children: Still-born children are not registered; but many of the infants that are born before term are born alive, and some survive. In the year, 8666 children born alive prematurely died, and are so returned, without any reference to any specific disease; 1454 deaths are referred to malformations. The teeth are cut with pain and difficulty; and in weakly children the consequent irritation is sometimes fatal; but it is probable that some of the 4083 deaths referred to teething are due to latent causes at work during the period of teething.

Of women, 122 are stated to have died of paramenia; while 2102 died of childbirth, exclusive of 1181 who died of metria, sometimes called puerperal fever.

The mortality, calculated by comparing the deaths from childbirth with the population, was lower in 1869 than the average; but metria showed no decline.

The question of the mortality of mothers in child-bearing is of the highest importance, and it is further illustrated by the series of Tables 14, 15, 16 (pp. 235-7). On comparing the annual deaths of mothers to children born alive it will be noted that the deaths of mothers averaged 49 to 10,000 children born alive in the 23 years 1847-69; the highest proportion, 61, was in the year 1848, the lowest, 42, in the last year of the series; thus it rose 12 above the average, and fell 9 below it. The range above the average exceeds the range below. This is a characteristic of death by epidemic disease.

Deaths of child-bearing women are sometimes caused by diseases, such as small-pox, under which heads they are then classed.

This subject is now undergoing investigation by a most competent inquirer, and the issue will lead to the diminution of this fatality, the most deplorable of all that happens to us. Senility has its special diseases ; but of old age 27,932 persons are said to have died.

#### V.—VIOLENT DEATHS.

16,497 deaths are referred to several evident causes which it has been usual to classify as violent. The proportion to population is much what it was in the year 1852 ; but it is much lower than it was some years ago, when the forces at man's disposal, employed recklessly, raised the number of deaths by violence every year, until in the year 1865 they attained the high pitch of 835 to a million living.

To the deaths by burning I have every year called attention, as the number can be controlled to a considerable extent, and the number of victims of fire has been lessened ; the deaths by burning and scalds were 3166 in the year 1860 and 2545 in the year 1869. Still further reductions in these deaths may be made, and are required.\*

Railways and mines are still the causes of many deaths which may be prevented.

I have the honour to be,

Sir,

Your obedient servant,

WILLIAM FARR.

To

*The Registrar General.*

\* NOTE.—Subjoined are the suggestions for preventing death by fire, which I reprint from the letter in your 24th report, published in 1863 :—

“ 1. *Open fires*, lights, and kettles of hot water should be surrounded by GOOD GUARDS. This precaution is of capital importance.

“ 2. Children and young people, and old women, should be systematically taught the danger of fire.

“ 3. The dresses of young children and old women should be made as much as possible of worsted or wool ; which will protect them against cold, as well as against fire.

“ 4. The muslin dresses, and cotton and linen clothes, might very properly be starched with the chemical materials which are found by experience to render them, to a certain extent, incombustible.

“ 5. Private houses should all be provided on each floor of the sleeping apartments with the means of escape, in the event of the lower apartments taking fire during the night. Especial provision to be made for women and children.

“ 6. Fireworks, powderworks, and chemical manufactories require special precautions.

“ 7. Persons falling asleep near the fire, or near lights, in a state of intoxication, or in fits, are frequently burnt to death.

“ 8. Young children drink scalding water out of the spout of the tea kettle, or fall into scalding water. This happens often in the lower classes, when the mother is out at work, and the young children are left at home alone. The means of obviating this danger are evident.

“ 9. Special arrangements are, it is scarcely necessary to add, required for preventing the explosions of mines or of steam engines.”

TABLE 1.—Deaths in England from Scarlet Fever, Cynanche Maligna, and Diphtheria, for each of the Years 1855 to 1869.\*

YEARS.	TOTAL.	SCARLET FEVER.	CYNANCHE MALIGNA, and DIPHTHERIA.	CYNANCHE MALIGNA.	DIPHTHERIA.

† Order 2, comprising Violent Deaths in Battle is inapplicable to the civil population.

‡ The number of persons executed in the several years will not necessarily correspond with that in the same years of the "Criminal Returns," inasmuch as the executions recorded in each year in the latter are derived from the dates of conviction, while the numbers in this Table are classed under the years in which the deaths are registered.

§ The cases of angina membranacea which would now be put to diphtheria were formerly classed under the same head as scarlet fever, but were distinguished in the notes.

TABLE 9.—Causes of Death registered in England in each of the Ten Years  
1860-1869—continued.

1852-57 cases of so-called "debility" and "premature birth" were classed together; when the new classification was introduced "h" was kept apart, and "debility" and "atrophy" were thrown into one line.  
 1858-69 the number of deaths in which the cause was not specified has been distributed pro ratâ over all the causes in the Table.

TABLE 11.—Causes of Death in England in 1869. Proportional Numbers dying from each Class of Causes, and from each Cause.

Class.	CAUSES OF DEATH.	1869		Class.	CAUSES OF DEATH.	1869		Class.	CAUSES OF DEATH.	1869	
		Deaths to 1,000,000 Persons living.	Proportional Number in 1,000,000 Deaths.			Deaths to 1,000,000 Persons living.	Proportional Number in 1,000,000 Deaths.			Deaths to 1,000,000 Persons living.	Proportional Number in 1,000,000 Deaths.

\* The Mean Annual Mortality in the 15 years from All Causes and from Specified Causes is the mean of the three quinquennial periods, and does not correspond exactly with the totals of the Orders and Classes; because under certain heads, for example, *Homicide, Suicide, and Causes not specified, &c.*, the complete details cannot be given for the entire period.

† Mean of 3 years. ‡ Order 2, comprising Violent Deaths in Battle, is omitted, as inapplicable to the civil population.

§ Mean of 2 years.

NOTE.—In a certain number of cases in each year the cause of death was not stated. In calculating the proportional numbers, since 1855, they have been distributed pro rata over all the causes in the Table.

\* This death was registered on 19th January 1866.

## INDEX OF DISTRICTS.

[The following Index furnishes a reference to the *Number* of each DISTRICT in the topographical arrangement adopted in the Tables of Abstracts contained in the Report, the numbers running consecutively from 1 to 623.\* In forming the alphabetical arrangement the principle is adopted of placing compound names in the order in which they are pronounced: thus, East Ashford will be found under the letter E, and not under A, as Ashford, East.]

*For names of Towns, such as Chester, Leamington, Torquay, &c., which are not found in this "Index of Districts," see the "Index of Sub-districts" (page 243) and "Index of certain Towns" (page 253).*

**A**

Aberayron, 596.  
Abergavenny, 578 *a*.  
Aberystwith, 597.  
Abingdon, 123.  
Alcester, 405.  
Alderbury, 263.  
Alnwick, 559.  
Alresford, 113.  
Alston, 564.  
Alton, 114.  
Altrincham, 454.  
Alverstokey, 97.  
Amersham, 148.  
Amesbury, 262.  
Ampthill, 181.  
Andover, 118.  
Anglesey, 623.  
Ashborne, 447.  
Ashby-de-la-Zouch, 414.  
Ashton-under-Lyne, 474.  
Askrigg, 537.  
Aston, 395.  
Atcham, 359.  
Atherstone, 397.  
Auckland, 542.  
Axbridge, 324.  
Axminster, 279.  
Aylesbury, 151.  
Aylsham, 232.

**B**

Bakewell, 449.  
Bala, 616.  
Banbury, 163.  
Bangor, 621.  
Barnet, 136.  
Barnsley, 505.  
Barnstaple, 295.  
Barrow-upon-Soar, 416.  
Barton-upon-Irwell, 470.  
Basford, 438.  
Basingstoke, 116.  
Bath, 326.  
Battle, 77.  
Beaminster, 277.

Bedale, 535.  
Bedford, 179.  
Bedminster, 328.  
Bedwelty, 578 *b*.  
Belford, 560.  
Bellingham, 557.  
Belper, 446.  
Berkhamstead, 147.  
Bermondsey, 28.  
Berwick, 561.  
Bethnal Green, 21.  
Beverley, 518.  
Bicester, 159.  
Bideford, 297.  
Biggleswade, 180.  
Billerica, 199.  
Billesdon, 410.  
Bingham, 443.  
Birkenhead, 460 *b*.  
Birmingham, 394.  
Bishop Stortford, 139.  
Blaby, 411.  
Blackburn, 480.  
Blandford, 270.  
Blean, 66.  
Blofield, 237.  
Blything, 225.  
Bodmin, 304.  
Bolton, 468.  
Bootle, 572.  
Bosmere, 220.  
Boston, 425.  
Bourn, 422.  
Brackley, 164.  
Bradfield, 126.  
Bradford-on-Avon, 258.  
Bradford (Yorkshire), 499.  
Braintree, 208.  
Bramham, 514 *b*.  
Bramley, 500 *d*.  
Brampton, 566.  
Brecknock, 600.  
Brentford, 134.  
Bridge, 64.  
Bridgend, 583.  
Bridgnorth, 356.  
Bridgewater, 316.  
Bridlington, 524.  
Bridport, 278.  
Brighton, 85.  
Bristol, 329.  
Brixworth, 170.

Bromley, 49.  
Bromsgrove, 392.  
Bromyard, 350.  
Buckingham, 154.  
Builth, 599.  
Burnley, 478.  
Burton-upon-Trent, 375.  
Bury, 469.  
Bury St. Edmunds, 215.

**C**

Caistor, 432.  
Calne, 254.  
Camberwell, 33.  
Cambridge, 187.  
Camelford, 300.  
Canterbury, 65.  
Cardiff, 581 *a*.  
Cardigan, 593.  
Carlisle, 568.  
Carmarthen, 589.  
Carnarvon, 620.  
Castle Ward, 554.  
Catherington, 111.  
Caxton, 185.  
Chapel-en-le-Frith, 450.  
Chard, 318.  
Cheadle, 373.  
Chelmsford, 200.  
Chelsea, 2.  
Cheltenham, 344.  
Chepstow, 576.  
Chertsey, 38.  
Chesterfield, 448.  
Chester-le-Street, 548.  
Chesterton, 186.  
Chichester, 92.  
Chippenham, 253.  
Chipping Norton, 162.  
Chipping Sodbury, 331.  
Chorley, 481.  
Chorlton, 471.  
Christchurch, 101.  
Church Stretton, 354.  
Cirencester, 340.  
Cleobury Mortimer, 355.  
Clifton, 330.  
Clitheroe, 479.

\* Thus, the number of Marriages in the Aberayron District may at once be ascertained by referring, in the "*Abstract of Marriages*," to the District numbered 596 (see page 24); and in like manner the number of Births and Deaths, of Deaths at different Ages, &c. will be found by referring to the same district number in the appropriate Tables.

Clun, 353.  
 Clutton, 325.  
 Cokermonth, 570.  
 Colchester, 204.  
 Congleton, 457.  
 Conway, 622.  
 Cookham, 129.  
 Corwen, 615.  
 Cosford, 213.  
 Coventry, 400.  
 Cranbrook, 60.  
 Crediton, 292.  
 Crickhowell, 601.  
 Cricklade, 251.  
 Croydon, 46.  
 Cuckfield, 83.

**D**

Darlington, 540.  
 Dartford, 50.  
 Daventry, 169.  
 Depwade, 239.  
 Derby, 445.  
 Devizes, 256.  
 Dewsbury, 502.  
 Docking, 244.  
 Dolgelly, 617.  
 Doncaster, 510.  
 Dorchester, 275.  
 Dorking, 43.  
 Dover, 72.  
 Downham, 247.  
 Driffild, 523.  
 Droitwich, 391.  
 Droxford, 110.  
 Dudley, 382.  
 Dulverton, 313 *b*.  
 Dunmow, 209.  
 Durham, 545.  
 Dursley, 333.

**E**

Easington, 546.  
 Easingwold, 527.  
 East Ashford, 63.  
 Eastbourne, 78.  
 East Grinstead, 82.  
 Easthampstead, 130.  
 East London, 17.  
 East Retford, 435.  
 Eastry, 71.

## INDEX OF SUB-DISTRICTS.

[In this alphabetical arrangement the principle is adopted of placing the Sub-Districts (or Registrars' Districts) having *compound names* in the order indicated by the usual pronunciation of those names; thus, East Grinstead will be found under the letter E, and not under G as "Grinstead, East;" St. James under the letter S, and not as "James, St." The number against each Sub-District, in the third column, refers to the order in which it appears in the arrangement of the Districts in the Tables of Abstracts; thus, Abbey Holme (569; 2) is the 2d Sub-District of the Wigton District, No. 569.]

SUB-DISTRICT.	DISTRICT.	No.	SUB-DISTRICT.	DISTRICT.	No.	SUB-DISTRICT.	DISTRICT.	No.

## ALPHABETICAL INDEX

TO

REGISTRAR-GENERAL'S THIRTY-SECOND ANNUAL  
REPORT AND APPENDIX.

	PAGE
<b>AGES ;</b> of Persons married in 1869 . . . . .	xiii
Mean Age at Marriage . . . . .	xiii
Deaths of Males and Females registered at different Ages in England in each of the Years 1838-69. (Tables 16, 17.) . . . .	xxi-xxii
Mortality of Males and Females at different Ages in England in the Years 1838-67. (Tables 18-21.) . . . .	xxiii-xxvi
of 243,362 Persons married in 1869, distinguishing Bachelors, Spin- sters, Widowers, Widows . . . . .	26-27
at Death of Males and Females registered in 1869 in Divisions, Counties, and Districts . . . . .	96-117
at Death of Males and Females in England registered from different Causes, in 1869 . . . . .	118-123
at Death of Males and Females in England registered from different Supplemental Causes, in 1869 . . . . .	124-127
at Death of Males and Females in London registered from different Causes, in 1869 . . . . .	128-133
<b>AREA</b> in Statute Acres of each Division, County, District, and Sub-district .	28-82
<b>ARMY ;</b> Strength and Mortality in the Army at home and abroad . . . .	xxxiii
Annual Rate of Mortality per 1000 in Great Britain, England, France, Austria, and Italy, including the Deaths of Soldiers <i>at Home and Abroad</i> , 1857-69. (Table 31.) . . . .	xxxii
Average Strength of the British Army at Home in 1869. (Table 32.)	xxxiii
Mortality of the Army at Home in 1869. (Table 33.) . . . .	xxxiii
Average Strength of the British Army Abroad in each of the Years 1866-69. (Table 34.) . . . .	xxxiv
Number of Deaths in the British Army at Home and Abroad, 1866-69. (Table 35.) . . . .	xxxiv
Annual Rate of Mortality per 1000 amongst Officers and Men in the Army Abroad, 1858-69. (Table 36.) . . . .	xxxiv
Strength at Home and Abroad in 1861, showing the Numbers born in the different parts of the United Kingdom and elsewhere. (Table 37.) . . . .	xxxv
Deaths in Army Abroad of Officers and Men belonging to England and Wales and to Great Britain, 1858-69. (Table 38.) . . . .	xxxv
<b>AUSTRIA ;</b> Estimated Population in middle of the Years 1853-69. (Table 27.) . . . .	xxx
Number, and Proportion per 1000 to Population, of Marriages, Births, and Deaths, in each of the Years 1853-69. (Table 28.) . . . .	xxxi
Annual Rate of Mortality per 1000 in the Austrian Army, 1857-69. (Table 29.) . . . .	xxxv

	PAGE
<b>BIRTHS</b> registered in England, in each Year, 1838-1869. (Table 1.) . . .	v
proportion to Population in each Year, 1838-69. (Table 2.) . . .	vi
Legitimate and Illegitimate in England in the Years 1845-69, and Proportion of Males to Females. (Table 8.) . . .	xiv
in Counties, in 1869. Numbers, Legitimate and Illegitimate, of the two Sexes; Proportions of Male to Female Births, Legi- timate and Illegitimate; Proportion of Illegitimate Births to Total Births. (Table 9.) . . . . .	xv
in 1869 . . . . .	xiii
proportion of Male and Female Children born in the several Counties of England during each of the Years 1860-69. (Table 10.) . . . . .	xvi
proportion to Population in Counties for each of the Years 1859-69. (Table 11.) . . . . .	xvii
of the two Sexes . . . . .	xiv
proportional Number of Births in each Quarter to 1,000 Births in the average Quarter, 1838-69. (Table 13.) . . . . .	xviii
registered in England, and proportion to Population, in each Quarter of the Years 1838-69. (Table 12.) . . . . .	xviii
in the four Seasons . . . . .	xiv
out of wedlock . . . . .	xiv-xvii
in quarter ending March 1869 . . . . .	xxxix-xl
in quarter ending June „ . . . . .	xliii
in quarter ending September „ . . . . .	xlvi
in quarter ending December „ . . . . .	li
registered in each of the Divisions, Counties, Districts, and Sub- districts in 1869 . . . . .	28-82
excess over Deaths in each of the Divisions, Counties, Districts, and Sub-districts in 1869 . . . . .	28-82
registered in the Divisions and Counties (distinguishing Males and Females) in each of the Four Quarters of 1869 . . . . .	84-87
of Children born out of Wedlock registered in the Divisions and Counties (distinguishing Males and Females) in each of the Four Quarters of 1869 . . . . .	88-91
<b>BIRTH-RATE</b> in Counties in each of the Years 1859-69. (Table 11.) . . .	xvii
in England in each Quarter of the Years 1838-69. (Table 12.) . . .	xviii
<b>BURNS AND SCALDS; Deaths and Mortality at different Ages, in the Years 1848-69. (Table 18.—App.) . . . . .</b>	237
<b>CAUSES of DEATH of Males and Females in England, at different Periods of Life, in 1869 . . . . .</b>	118-123
(Supplementary Table) of Males and Females in England at different Periods of Life, in 1869 . . . . .	124-127
of Males and Females in London at different Periods of Life, in 1869 . . . . .	128-133
of Males and Females in England, and in each of the Divisions and Counties, in 1869 . . . . .	134-157
(from certain zymotic and other Causes) in 1869, in the Divisions, Counties, and Districts of England . . . . .	158-169
Dr. Farr's Letter to the Registrar General thereon . . . . .	215-220
registered in England in each of the Ten Years 1860-69. (Table 9.—App.) . . . . .	225-227
Mortality from the several Causes in each of the Years 1852-69. (Table 10.—App.) . . . . .	228-230

CAUSES of DEATH— <i>continued</i> .	PAGE
proportional Numbers dying from each Cause in 1869. (Table 11.—App.) . . . . .	231
Mean Annual Rate of Mortality from different Causes during three periods of Five Years, and in 1869. (Table 12.—App.) . . . . .	232-233
in England, in 1869, arranged in the order of their fatality. (Table 13.—App.) . . . . .	234
CHILDBIRTH; fatal diseases of . . . . .	219
Deaths in 1869, at different Ages, of Women after Childbearing, classed under different Diseases, and neither referred to Child-birth nor to Metria in the Abstracts. (Table 14.—App.) . . . . .	235
Deaths of Women in 1869 who were returned as pregnant, classed under certain Diseases. (Table 15.—App.) . . . . .	236
Deaths of Women from Metria and Childbirth in the 23 Years, 1847-69, and proportional Deaths of Mothers to Children born alive. (Table 16.—App.) . . . . .	236
CYNANCHE MALIGNA and DIPHTHERIA; Deaths in England at different Ages in each of the Years, 1855-69. (Tables 1. and 2.—App.) . . . . .	221
DEATHS registered in England in each Year, 1838-1869. (Table 1.) . . . .	v
proportion to Population in each Year, 1838-69. (Table 2.) . . . .	vi
in 1869 . . . . .	xix
registered in England at different ages (Males and Females) in the 32 years 1838-69. (Tables 16, 17.) . . . . .	xxi-xxii
registered in England in each Quarter of the Years 1838-69. (Table 22.) . . . . .	xxvii
proportion to Population . . . . .	xix
Meteorology and Mortality . . . . .	xix-xx
in the four Seasons . . . . .	xxi
of the two Sexes . . . . .	xxi
Mortality in different localities . . . . .	xxii-xxiii
Mortality in the Eleven large Towns . . . . .	xxiii
Mortality at different Ages of Males and Females . . . . .	xxiv-xxv
proportional Number in each Quarter to 1,000 Deaths in the average Quarter, 1838-69. (Table 23.) . . . . .	xxvii
registered in each of the Divisions, Counties, Districts, and Sub-districts in 1869 . . . . .	28-82
registered in each of the Four Quarters of 1869 (distinguishing Males and Females), in Divisions and Counties . . . . .	92-95
of Males and Females at different Ages registered in 1869 in Divisions, Counties, and Districts . . . . .	96-117
in 1869 in the principal Public Institutions . . . . .	195-212
DEATHS FROM DIFFERENT CAUSES. ( <i>See CAUSES OF DEATH.</i> )	
DEATHS FROM VIOLENCE. ( <i>See VIOLENT DEATHS.</i> )	
DEATH-RATE of Males and Females in each of the Years 1838-69. (Table 14.) . . . . .	xix
in Counties in each of the Years 1859-69. (Table 15.) . . . .	xx
in each Quarter of the Years 1838-69. (Table 23.) . . . .	xxvii
per 1000 at different Ages of Males and Females in England in the years 1838-67. (Tables 18, 19, 20, 21.) . . . . .	xxiii-xxvi
Average Annual Rate in the 10 years 1851-60 in the Divisions, Counties, and Districts of England . . . . .	158-169
from the several causes to 1,000,000 living in each of the years 1852-69. (Table 10.—App.) . . . . .	228-230
Mean Annual Rate from different Causes during three periods of five years, and in 1869. (Table 12.—App.) . . . . .	232-233
( <i>See also DEATHS.</i> )	

	PAGE
DEATHS and STATE of the PUBLIC HEALTH in quarter ending March 1869.	xli
in quarter ending June „ .	xliv
in quarter ending September „ .	xliv
in quarter ending December „ .	lii
DEVELOPMENTAL DISEASES . . . . .	219
DIATHETIC DISEASES . . . . .	217
DIARRHŒA ; Deaths from . . . . .	215
